**RISK SUMMARY**

Investments in smaller companies may be riskier, less liquid, more volatile and more vulnerable to economic, market and industry changes than investment in larger, more established companies. Changes in the price of debt or equity issued by such companies may be more sudden or erratic than the prices of other securities, especially over the short term.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on

downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Rankings do not take sales loads into account.

**DEFINITIONS**

Risk measures are calculated based upon the Funds' broad-based index as stated in the prospectus.

**Sharpe ratio** measures the fund's excess return compared to a risk-free investment. The higher the Sharpe ratio, the better the returns relative to the risk taken.

**P/E ratio** is the number by which earnings per share is multiplied to estimate a stock's value.

**Beta** measures a fund's volatility in comparison to the market as a whole. A beta of 1.00 indicates a fund has been exactly as volatile as the market.
