Share Class Inception: A, Y - 2/19/02; F - 2/28/17; I - 8/31/06. Performance shown prior to the inception of a class reflects performance and operating expenses of another class(es) (excluding sales charges, if applicable). Had fees and expenses of a class been reflected for the periods prior to the inception of that class, performance would be different. Since inception (SI) performance for A is from 1/4/88; F, I, and Y is from 2/19/02. Performance and expenses for other share classes will vary. Additional information is in the prospectus. Only Class A assesses a sales charge.

Russell 2000 Growth Index is an unmanaged index of those Russell 2000 Index growth companies with higher price-to-book ratios and higher forecasted growth values. Indices are unmanaged and not available for direct investment.

Important Risks: Investing involves risk, including the possible loss of principal. Security prices fluctuate in value depending on general market and economic conditions and the prospects of individual companies. • Small-cap securities can have greater risks, including liquidity risk, and volatility than large-cap securities. • Different investment styles may go in and out of favor, which may cause the Fund to underperform the broader stock market. • To the extent the Fund focuses on one or more sectors, the Fund may be subject to increased volatility and risk of loss if adverse developments occur.

Asset Weighted Market Cap is the value of a corporation as determined by the number of outstanding shares of common stock multiplied by the price per share. **Beta** measures the volatility of a portfolio relative to a benchmark. A beta of less than 1.00 indicates lower risk than the market; a beta of greater than 1.00 indicates higher risk than the market. **EPS Growth Rate** is the projected growth rate in earnings per share for the next five years. **Price/Book** is the ratio of a stock's price to its book value per share. **Price/Earnings** is the ratio of a stock's price to its earnings per share. **R Squared** represents the percentage of the portfolio's movement that can be explained by the market. **Return on Equity** is the average amount of net income returned as a percentage of shareholder's equity over the past five years. **Standard Deviation** measures the portfolio's total-return volatility. A higher standard deviation indicates greater historical volatility. **Turnover** is a percentage of a portfolio's assets that have changed over the course of a year. It is calculated by dividing the average assets during the period by the lesser of the value of purchases or the value of sales during the same period.
