Average annual total returns¹

	Qtd	Ytd	1 yr	3 yr	5 yr	10 yr	Life of fund	Life of fund date
Class I without sales charge	6.61	13.12	34.41	14.03	12.05	—	9.39	5/16/13
Class A without sales charge	6.54	13.04	34.09	13.73	11.73	—	9.08	5/16/13
Class A with sales charge	1.23	7.39	27.42	11.80	10.59	—	8.39	5/16/13
MSCI World Index	7.74	13.05	39.04	14.99	14.83	—	10.93	—
World large stock blend category	6.54	12.11	37.78	13.00	12.94	—	—	—

Expense ratios²

	Gross	Net (what you pay)	Contractual through
Class I	1.02%	1.01%	12/31/2021
Class A	1.32%	1.31%	12/31/2021

The past performance shown here reflects reinvested distributions and the beneficial effect of any expense reductions, and does not guarantee future results. The sales charge for Class A shares, reflects the maximum sales charge of 5.0%. For Class I shares, there is no sales charge. Returns for periods shorter than one year are cumulative, and results for other share classes will vary. Shares will fluctuate in value and, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance cited. For the most recent month-end performance, visit jhinvestments.com.

Growth of a hypothetical \$10,000 investment³

Class I without sales charge – 6/1/13 – 6/30/21

Managed by

Investing since 1993

Stephen Hermsdorf

On the fund since 2018.
Investing since 1996

¹ The MSCI World Index tracks the performance of publicly traded large- and mid-cap stocks of developed-market companies. It is not possible to invest directly in an index. ² "Net (what you pay)" represents the effect of a contractual fee waiver and/or expense reimbursement and is subject to change. ³ Performance data shown excludes fees and expenses. The performance data would be lower if such fees and expenses were included. Past performance does not guarantee future results.

What you should know before investing

Foreign investing, especially in emerging markets, has additional risks, such as currency and market volatility and political and social instability. Value stocks may decline in price. Fixed-income investments are subject to interest-rate and credit risk; their value will normally decline as interest rates rise or if an issuer is unable or unwilling to make principal or interest payments. Investments in higher-yielding, lower-rated securities include a higher risk of default. Frequent trading may increase fund transaction costs, and the use of hedging and derivatives could produce disproportionate gains or losses and may increase costs. Please see the fund's prospectus for additional risks.

3 Performance data shown excludes fees and expenses. The performance data would be lower if such fees and expenses were included. Past performance does not guarantee future results. **4** Returns for the fund's first year are since fund inception. **5** Listed holdings reflect the largest portions of the fund's total and may change at any time. They are not recommendations to buy or sell any security. Data is expressed as a percentage of net assets and excludes cash and cash equivalents. Fund characteristics will vary over time. **6** The portfolio turnover is as of the fund's fiscal year end and is subject to change. The fund's annual report includes further details regarding the portfolio turnover ratio. **7** FactSet. Average market cap is based on a weighted average. **8** Beta measures the sensitivity of the fund to its benchmark. The beta of the market (as represented by the benchmark) is 1.00. Accordingly, a fund with a 1.10 beta is expected to have 10% more volatility than the market. **9** R-squared is a measurement that indicates how closely a fund's performance correlates with the performance of its benchmark index. R-squared can range from 0.00 to 1.00, with 1.00 indicating perfect correlation to the index. **10** Sharpe ratio is a measure of excess return per unit of risk, as defined by standard deviation. A higher Sharpe ratio suggests better risk-adjusted performance. **11** Standard deviation is a statistical measure of the historic volatility of a portfolio. It measures the fluctuation of a fund's periodic returns from the mean or average. The larger the deviation, the larger the standard deviation and the higher the risk. **12** Upside capture ratio measures a manager's performance in up markets relative to the market itself. Downside capture ratio measures a manager's performance in down markets relative to the market itself.
