PRINCIPAL RISKS:

Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Funds that emphasize investments in small and mid-cap companies generally will experience greater price volatility. Commodities and futures generally are volatile and involve a high degree of risk. The Adviser from time to time employs various hedging techniques, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs.

An investor considering the Fund should be able to tolerate potentially wide price fluctuations. The Fund is subject to high portfolio turnover risk as a result of frequent trading, and thus, will incur a higher level of brokerage fees and commissions, and cause a higher level of tax liability to shareholders in the Fund. Since the Fund may also attempt to increase its income or total return through the use of securities lending, it may be subject to the possibility of additional loss as a result of this investment technique.

The Fund is not suitable for all investors. There are risks involved with investing including the possible loss of principal. Past performance does not guarantee future results. Diversification does not eliminate the risk of experiencing investment losses.
