

Q1 | 2021

AMG Yacktman Focused Fund - Security Selection Only

FACT SHEET

ASSET CLASS | LARGE CAP

Class N | YFSNX

Class I | YFSIX

Headquarters: Austin, TX

Founded: 1992

Specialization: Value equity investing

Portfolio Managers

Stephen Yacktman

Jason Subotky

Style²

Large Cap Value

Primary Benchmark⁴

Russell 1000® Value Index

Secondary Benchmark

S&P 500® Index

Fund highlights

- ▶ The subadvisor's seasoned investment team has a track record and reputation of maintaining strict investment discipline and managing equity volatility
- ▶ Targets investments in undervalued stocks by seeking to identify companies with one or more of the following characteristics: good business, shareholder-oriented management or low purchase price
- ▶ Under normal circumstances, at least 95% of the Fund's assets will be invested in securities

Average annual returns (%)¹ (as of 03/31/21)

	Inception	Q1	YTD	1 Yr	3 Yr	5 Yr	Since Incept
YFSNX (Class N)	01/30/17	7.20	7.20	68.39	16.47	-	16.67
YFSIX (Class I)	01/30/17	7.20	7.20	68.65	16.50	-	16.69
Primary Benchmark	-	11.26	11.26	56.09	10.96	11.74	10.21
Secondary Benchmark	-	6.17	6.17	56.35	16.78	16.29	16.49

Calendar year performance (%)³

Expense Ratios (gross/net): Class N 1.23% / 1.13%, Class I 1.19% / 1.09%

Sector weightings (%)⁵

Sector	Fund	Primary Benchmark
Communication Services	20.19	9.19
Information Technology	17.05	9.53

KT&G Corp	3.90
Financière de L'Odé SA	3.54
Ocean Wilsons Holdings Ltd	3.17
Fox Corp, Class B	2.81
News Corp, Class A	2.58
Brenntag SE	2.31
CB Industrial Product Holding Bhd	2.15
TOTAL %	47.00

¹ Returns for periods less than one year are not annualized.

² Style box placement is based on Fund's principal investment strategies. It does not necessarily represent the Fund's current or future portfolio holdings.

³ Performance is shown for the class of shares with the longest track record. If there are multiple share classes with the same inception date then performance represents the share class with the highest expense ratio. In cases where the share class with the longest track record has lower expenses, the performance of share classes with higher expenses would result in lower performance than that shown.

⁴ Effective June 30, 2020, the Fund's primary and secondary benchmarks were changed. The Russell 1000® Value Index became the primary benchmark and S&P 500 Index the secondary benchmark; previously the S&P 500 Index was the primary benchmark and the Russell 1000® Value Index was the secondary benchmark.

⁵ Weights may not equal 100% due to rounding.

⁶ Mention of a specific security should not be considered a recommendation to buy or a solicitation to sell that security. Holdings are subject to change.

The performance data shown represents past performance. Past performance is not a guarantee of future results. Current performance may be lower or higher than the performance data quoted. The investment return and the principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. For performance information through the most recent month end please call 800.835.3879 or visit our website at amgfunds.com.

Fund facts

Share Class	Ticker	Expense Ratio (Gross/Net)	Minimum Initial Investment	12b-1 Fees

¹ The Fund's Investment Manager has contractually agreed, through May 1, 2021, to limit fund operating expenses. The net expense ratio reflects this limitation, while the gross expense ratio does not. Please refer to the Fund's Prospectus for additional information on the Fund's expenses.

² Characteristics derived from FactSet.

³ Weighted harmonic average.

⁴ Weighted average.

⁵ Annualized.

⁶ Calculated for a three year period.

⁷ Relative to primary benchmark.

Investors should carefully consider the Fund's investment objectives, risks, charges and expenses before investing. For this and other information, please call 800.835.3879 or visit amgfunds.com for a free Prospectus. Read it carefully before investing or sending money.

Definitions

Alpha: Alpha is a measure of performance on a risk-adjusted basis. Alpha takes the volatility (price risk) of a security or mutual fund and compares its risk-adjusted performance to a benchmark index. The excess return of the security or fund relative to the return of the benchmark index is a fund's alpha.

Beta: Beta measures the relationship between the portfolio's excess return over T-bills (representing a risk-free rate) relative to the excess return of the portfolio's benchmark. A low beta does not imply that the portfolio has a low level of volatility; rather, a low beta means that the portfolio's market-related risk is low. Beta is often referred to as systematic risk.

Downside Capture Ratio: The downside capture ratio measures a manager's performance in down markets relative to a particular benchmark. A down market is one in which the market's quarterly (or monthly) return is less than zero. For example, a ratio of 50% means that the portfolio's value fell half as much as its benchmark index during down markets.

Earnings Per Share (EPS): Earnings Per Share (EPS) is a company's profits per share of common stock.

Information Ratio: The information ratio (IR) measures a portfolio manager's ability to generate excess returns relative to a benchmark, but also attempts to identify the consistency of the portfolio manager. The higher the IR, the more consistent a manager is.

Market Capitalization: This figure represents the current stock-market value of a company's equity. It is calculated as the current share price times the number of shares outstanding as of the most recent quarter.

Price/earnings Ratio (P/E): Price/earnings (or P/E) ratio is a comparison of the company's closing stock price and its trailing 12-month earnings per share.

Sharpe Ratio: The Sharpe ratio is calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the portfolio's historical risk-adjusted performance.

Standard Deviation: Annualized standard deviation is a measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Standard deviation is calculated as the square root of variance.

Tracking Error: Tracking error measures the standard deviation of the excess returns a portfolio generates compared to its benchmark. If a manager tracks a benchmark closely, then tracking error will be low. If a manager tracks a benchmark perfectly, then tracking error will be zero.

Upside Capture Ratio: The upside capture ratio is a measure of a manager's performance in up markets relative to a particular benchmark. An up market is one in which the market's quarterly (or monthly) return is greater than or equal to zero. For example, a ratio of 50% means that the portfolio's value increased half as much as its benchmark index during up markets.

The upside capture ratio is a measure of a manager's performance in up markets relative to a particular benchmark. An up market is one in which the market's quarterly (or monthly) return is greater than or equal to zero. For example, a ratio of 50% means that the portfolio's value increased half as much as its benchmark index during up markets.

The Russell 1000 Value and the S&P 500 Index are provided for illustrative purposes only, are unmanaged, reflect reinvestment of income and dividends and do not reflect the impact of advisory fees. The S&P 500 is a widely unmanaged index of market activity based on the aggregate performance of a selected portfolio of publicly trade common stocks and we have included the results of such index to give you a perspective of the historical performance of the U.S. equity market.

The Fund may invest greater than 5% of its assets in money market securities, cash, or cash equivalents as a temporary defensive measure in response to adverse market, economic, political or other conditions.

The Fund may suffer significant losses on assets that it sells short. Unlike the possible loss on a security that is purchased, there is no limit on the amount of loss on an appreciating security that is sold short.

The Fund is subject to the risks associated with investments in debt securities, such as default risk and fluctuations in the perception of the debtor's ability to pay its creditors. Changing interest rates may adversely affect the value of an investment. An increase in interest rates typically causes the value of bonds and other fixed income securities to fall.

The Fund invests in value stocks, which may perform differently from the market as a whole and may be undervalued by the market for a long period of time.

The Fund may invest in derivatives such as options and futures; the complexity and rapidly changing structure of derivatives markets may increase the possibility of market losses.

A greater percentage of the Fund's holdings may be focused in a smaller number of securities which may place the Fund at greater risk than a more diversified fund.

High-yield bonds (also known as "junk bonds") may be subject to greater levels of interest rate, credit, and liquidity risk than investments in higher rated securities. These securities are considered predominantly speculative with respect to the issuer's continuing ability to make principal and interest payments. The issuers of the Fund's holdings may be involved in bankruptcy proceedings, reorganizations, or financial restructurings, and are not as strong financially as higher-rated issuers. Investments in international securities are subject to certain risks of overseas investing including currency fluctuations and changes in political and economic conditions, which could result in significant market fluctuations. These risks are magnified in emerging markets.

Companies that are in similar industry sectors may be similarly affected by particular economic or market events; to the extent the Fund has substantial holdings within a particular sector, the risks associated with that sector increase.

The Fund is subject to risks associated with investments in mid-capitalization companies such as greater price volatility, lower trading volume, and less liquidity than the stocks of larger, more established companies.

The Fund is subject to risks associated with investments in small-capitalization companies, such as erratic earnings patterns, competitive conditions, limited earnings history and a reliance on one or a limited number of products.

Market prices of investments held by the Fund may fall rapidly or unpredictably due to a variety of economic or political factors, market conditions, disasters or public health issues, or in response to events that affect particular industries or companies.

The S&P 500® Index is a capitalization-weighted index of 500 stocks. The S&P 500 Index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. The Russell 1000® Value Index is a market capitalization weighted index that measures the performance of those Russell 1000® companies with lower price-to-book ratios and lower forecasted growth values.

Unlike the Fund, indices are unmanaged, are not available for investment and do not incur expenses.

AMG Funds are distributed by AMG Distributors, Inc., a member of FINRA/SIPC.
