Quarterly Fact Sheet | Institutional Class: GVALX

ABOUT THE FUND

OVERVIEW

- Value weighted long-only U.S. equity strategy that selects from the largest 500 - 700 U.S. companies based on market capitalization

INVESTMENT OBJECTIVE AND STRATEGY

- Seeks long-term capital appreciation by investing in long positions of equity securities and in doing so aims to achieve a total return greater than that of the S&P 500 over a full market cycle, which includes bull (rising) and bear (falling) markets

COMPETITIVE ADVANTAGES

Experienced Management

The fund is managed by Joel Greenblatt and Robert Goldstein, who have over 50 years of combined hedge fund management experience.

Proprietary Research Methodology

Gotham follows a disciplined process of researching and valuing companies, rebalancing positions daily to take advantage of changing stock prices and fundamental information.

Portfolio Diversification and Risk Management

Our portfolios are highly diversified with hundreds of positions (not equally weighted). Risks are managed daily through a systematic process developed by our team of research professionals.

Tax Goal²

We aim to achieve long term capital gains treatment for the vast majority of any realized gains.

The performance data quoted represents past performance. Past performance is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares upon redemption may be worth more or less than their original cost. The performance quoted does not reflect a 1% redemption fee on shares redeemed within 30 days of purchase. Returns would have been lower if certain expenses had not been reduced or reimbursed. Current performance may be lower or higher than the performance quoted here. To obtain performance current to the most recent month-end, please call 877-974-6852.

The S&P 500 Total Return Index is a market capitalization-weighted index of 500 large-capitalization stocks commonly used to represent the U.S. equity market. Returns for the S&P 500 Total Return Index include the reinvestment of income and do not include transaction fees, management fees or any other costs. The S&P 500 Value Total Return Index is a market-capitalization-weighted index composed of large-capitalization U.S. equities that exhibit value characteristics. The performance and volatility of the fund will be different than those of the indexes. The indexes are unmanaged and investors cannot invest directly in the indexes.

The Morningstar Rating™ ("star rating") is calculated for funds with at least a three-year history. Exchange-traded and open-end mutual funds are combined into a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each fund category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ is a weighted average of the performance figures associated with a fund's 3-, 5-, and 10-year (if applicable) Morningstar Rating™ metrics. In the Large Value category, GVALX was rated 4 stars among 1144 funds for the 3 year period and 4 stars among 1022 funds for the 5 year period ending 9/30/21.

Morningstar category rankings are based on a fund's total return compared to its Morningstar peer group of exchange-traded and open-end mutual funds. The highest percentile rank is 1 and the lowest percentile rank is 100. For the trailing one year and five year time periods through 9/30/2021, the Morningstar rankings were 69th percentile among 1112 and 10th percentile among 1050 Large Value funds. © 2020 Morningstar, Inc. INVESTMENT PROCESS

- The Co-CIOs and their team of equity analysts employ Gotham's proprietary analytical framework to evaluate stocks within the coverage universe on measures of absolute and relative value.
- Gotham's equity research and risk controls are used to select long stock portfolios from a large market capitalization universe.
- The portfolio is rebalanced daily to weight most heavily those stocks priced at the largest discount to Gotham's assessment of value.
- In general, as a company appears cheaper, its weight in the portfolio increases.
- Risk for the fund is managed by limiting concentration in any one company, industry or sector. In addition, exposures are managed daily to remain within carefully defined ranges.

IMPORTANT INFORMATION

*Effective August 31, 2018, Management Fees was reduced from 0.80% to 0.75%. Prior to August 31, 2018, the Expense Limitation was 0.95%.

Mutual fund investing involves risks, including possible loss of principal. It is anticipated the fund will frequently adjust the size of its positions and thus may experience high portfolio turnover which may increase brokerage costs.
