Returns quoted are past performance and do not guarantee future results; current performance may be lower or higher. Investment returns and principal value will vary; there may be a gain or loss when shares are sold. For the most recent month-end performance call 800.668.0434 or visit janushenderson.com/performance.

Maximum Offering Price (MOP) returns include the maximum sales charge of 5.75%. Net Asset Value (NAV) returns exclude this charge, which would have reduced returns.

High absolute short-term performance is not typical and may not be achieved in the future. Such results should not be the sole basis for evaluating material facts in making an investment decision.

INVESTORS

Index represents the MSCI World IndexSM.

Performance for Class A Shares, and Class I Shares that includes periods prior to 7/6/09 reflects the performance of one or more share classes of the Fund, adjusted, where applicable and permitted, for differing fees and expenses. See the Fund's prospectus for further details.

Returns include reinvestment of dividends and capital gains. Returns greater than one year are annualized.

This Fund has a performance-based management fee that may adjust up or down based on the Fund's performance.

Holdings are subject to change without notice.

There is no assurance the stated objective(s) will be met.

Sectors are defined by Janus Henderson based upon its research team structure, and will vary from standard classifications.

Country and/or regional weights primarily based on MSCI classifications.

Investing involves risk, including the possible loss of principal and fluctuation of value.

Foreign securities are subject to additional risks including currency fluctuations, political and economic uncertainty, increased volatility, lower liquidity and differing financial and information reporting standards, all of which are magnified in emerging markets.

Growth stocks are subject to increased risk of loss and price volatility and may not realize their perceived growth potential.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

MSCI World IndexSM reflects the equity market performance of global developed markets. **MSCI All Country World IndexSM** reflects the equity market performance of global developed and emerging markets. **Alpha** compares risk-adjusted performance relative to an index. Positive alpha means outperformance on a risk-adjusted basis. **Beta** measures the volatility of a security or portfolio relative to an index. Less than one means lower volatility than the index; more than one means greater volatility. **R-squared (R²)** measures the relationship between portfolio and index performance on a scale of 0.00 (0%) to 1.00 (100%). A higher R² indicates more of the portfolio's performance is affected by market movements and vice versa. **Standard Deviation** measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk. **Active Share** represents the portion of portfolio holdings that differ from an index. **Turnover** is a measure of portfolio trading activity. Higher turnover may indicate higher transaction costs and vice versa.
