Past performance is no guarantee of future results. Performance prior to 03 Feb 2020 reflects investment strategies that differed slightly from those currently in place. Investment returns and principal value will fluctuate so that shares redeemed may be worth more or less than their original cost. Current performance may be higher or lower than the performance shown. Total returns for a period of less than one year are cumulative. Returns without sales charges would be lower if the sales charges were included. Returns assume reinvestment of dividends and capital gains. For performance current to the most recent month-end visit nuveen.com. Performance shown for benchmark since inception is as of the Fund's oldest share class.

Class I shares have no sales charge and may be purchased by specified classes of investors. Class C shares have a 1% CDSC for redemptions within less than one year, which is not reflected in the one-year total return. Effective Jul 2018, Class C shares automatically convert to Class A shares during the month in which the 10-year anniversary (effective Mar 2021, this will change to 8-year anniversary) of the share purchase occurred. Since Inception returns for Class C shares for periods longer than 10 years reflect the performance of Class A shares after the deemed 10-year conversion to Class A shares within such periods. Class R6 shares have no sales charge and are available to certain qualified retirement plans and other investors as set forth in the statement of additional information.

Expense ratios (%)

	Class I	Class A	Class C	Class R6
Gross	0.90	1.15	1.90	0.69
Net	0.65	0.90	1.65	0.44

Expense ratios are based on the Fund's most recent fiscal year end. The net expense ratio reflects a contractual commitment by the Fund's investment adviser to waive fees and/or reimburse expenses through 31 Jul 2022. Absent the waiver and/or reimbursement, expenses would be higher and total returns would be less. Please see the prospectus for details.

Morningstar ranking/number of funds in category displays the Fund's actual rank within its Morningstar Category based on average annual total return and number of funds in that Category. The returns assume reinvestment of dividends and do not reflect any applicable sales charge. Absent expense limitation, total return would be less. Morningstar percentile rankings are the Fund's total return rank relative to all the funds in the same Morningstar Category, where 1 is the highest percentile rank and 100 is the lowest percentile rank.

For the period ended 30 Sep 2021, Morningstar rated this Fund's I shares, for the overall, three-, five-, and 10-year periods (if applicable). The Class I shares received 4, 4, 4, and 4 stars among 1133, 1133, 1024, and 762 Large Growth Funds, respectively. These ratings are for Class I shares only; other classes may have different performance characteristics. Investment performance reflects applicable fee waivers. Without such waivers, total returns would be reduced and ratings could be lower. For the most current ratings, please visit nuveen.com.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. ©2021 Morningstar, Inc. Glossary

Beta is a measure of the volatility of a portfolio relative to the overall market. A beta less than 1.0 indicates lower risk than the market; a beta greater than 1.0 indicates higher risk than the market. **P/E ratio** of a stock is calculated by dividing the current price of the stock by its forecasted 12 months' earnings per share. The average of the price/earnings ratio of a fund is a weighted harmonic average of all the current P/E ratios (excluding negatives) of the stocks in the Fund's portfolio. This should not be construed as a forecast of the Fund's performance. **Standard deviation** is a statistical measure of the historical volatility of a mutual fund or portfolio; the higher the number the greater the risk. **Weighted average market capitalization** is the portfolio-weighted mean capitalizations of all equity securities.

Russell 1000 Growth Index measures the performance of those Russell 1000 companies with higher price-to-book ratios and higher forecasted growth values. **It is not possible to invest directly in an index.**

A word on risk

Mutual fund investing involves risk; principal loss is possible. There is no guarantee that the Fund's investment objectives will be achieved. Because the Fund's **Environmental Social Governance (ESG)** investment strategy may exclude securities of certain issuers for nonfinancial reasons, the Fund may forgo some market opportunities available to funds that don't use an ESG investment strategy. Prices of **equity securities** may decline significantly over short or extended periods of time. **Growth stocks** tend to be more volatile than certain other types of stocks and their prices usually fluctuate more dramatically than the overall stock market. **Non-U.S. investments** involve risks such as currency fluctuation, political and economic instability, lack of liquidity and differing legal and accounting standards. These and other risk considerations, such as active management and growth stock risks, are described in detail in the Fund's prospectus.

Before investing, carefully consider fund investment objectives, risks, charges and expenses. For this and other information that should be read carefully, please request a prospectus or summary prospectus from your financial professional or Nuveen at 800.257.8787 or visit nuveen.com.
