

Pax Small Cap Fund

Q3 2021

INVESTMENT OVERVIEW

A core strategy that fully integrates analysis of sustainability risks and opportunities and focuses on higher quality companies at reasonable prices.

- The Fund uses a proprietary sustainability lens and ESG* research to better manage sustainability risks and identify opportunities, and is fossil fuel free.
- Bottom-up stock selection focuses on companies that exhibit high free cash flow, strong balance sheets, undervalued growth potential and management teams that exercise capital discipline.
- Seeks to control volatility and reduce downside risk through a focus on valuation and quality, together with a strong sell discipline.
- Promotes improved corporate outcomes through Pax's shareholder engagement program and proxy voting efforts.

HISTORICALLY HAS SHOWN LOWER RISK as of 9/30/2021

For the 10 year period ending 09/30/2021, the Pax Small Cap Fund's (PXSCX) focus on reasonably priced companies with quality characteristics has helped mitigate losses and reduce portfolio risk.

*Environmental, social, and governance (ESG) criteria are a set of standards for a company's operations that socially conscious investors use to screen potential investments. Environmental criteria consider how a company performs as a steward of nature. Social criteria examine how it manages relationships with employees, suppliers, customers, and the communities where it operates. Governance deals with a company's leadership, executive pay, audits, internal controls, and shareholder rights.

[^]Downside Capture is a measure of an investment manager's overall performance in down-markets and is used to evaluate how well or poorly an investment manager performed relative to an index during periods when that index has dropped. A downside capture ratio less than 100 indicates that the investment manager has outperformed its index during down-markets, while downside capture ratio greater than 100 indicates that the investment manager has underperformed its index during down-markets.

^xThe Russell 2000 Index ("Benchmark") is an unmanaged index and measures the performance of the small-cap segment of the US equity universe. The Russell 2000 Index is a subset of the Russell 3000 Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. One cannot invest directly in any index.

[~]Lipper Small-Cap Core Average is the average return of the entire Lipper Small-Cap Core classification. The Lipper Small Cap Core Funds Average is a total return performance average of the mutual funds tracked by Lipper, Inc. that, by portfolio practice, invest at least 75% of their equity assets in companies with market capitalizations (on a three-year weighted basis) below Lipper's USDE small-cap ceiling. Small cap core funds have more latitude in the companies in which they invest. These funds typically have an average price-to-earnings ratio, price-to-book ratio, and three-year sales-per-share growth value, compared to the S&P SmallCap 600 Index. The Lipper Small-Cap Core Funds Index is not what is typically considered to be an "index" because it tracks the performance of other mutual funds rather than the changes in the value of a group of securities, a securities index or some other traditional economic indicator. One cannot invest directly in any index.

¹Weighted Average is an average in which each quantity to be averaged is assigned a weight. These weightings determine the relative importance of each quantity on the average.

²The Fund's weighted average carbon intensity (a measure of tonnes of CO2 emitted per US\$M of revenue) was 73.9 vs. 134.6 for the benchmark. Data availability for the Fund is 80.36% by weight, and 58.54% of the benchmark by weight.

Pax World Funds ("Pax") are advised by Impax Asset Management LLC, a pioneer in the field of sustainable investing. Pax offers a diverse lineup of mutual funds focused on the risks and opportunities arising from the transition to a more sustainable global economy.

RISK: Equity investments are subject to market fluctuations, the fund's share price can fall because of weakness in the broad market, a particular industry, or specific holdings. Funds that emphasize investments in smaller companies generally will experience greater price volatility. The Fund is actively managed. The investment techniques and decisions of the investment adviser and the Fund's portfolio manager(s), including the investment adviser's assessment of a company's ESG profile when selecting investments for the Fund, may not produce the desired results and may adversely impact the Fund's performance, including relative to other Funds that do not consider ESG factors or come to different conclusions regarding such factors.

*The Morningstar style box is a nine-square grid that classifies securities by size along the vertical axis and by style (Value and Growth Characteristics) along the horizontal axis. Morningstar's equity style methodology uses a building block, holdings-based approach. Funds are classified as large, mid, or small based on the market capitalization of its portfolio holdings. Style is determined at the stock level and then those attributes are rolled up to determine the overall investment style of a fund. As of 6/30/2021.

^gFigures include reinvested dividends, capital gains distributions, and changes in principal value.

^hInception of Class A shares is May 1, 2013. The performance information shown for Class A represents the performance of the Investor Class shares for the period prior to Class A inception. Class A Inception date return since May 1, 2013 is 10.96 (annualized). Class A: A 1.00% CDSC (contingent deferred sales charge) may be charged on any shares sold within 18 months of purchase over \$1 million.

^fThe Lipper Small-Cap Core Funds Index tracks the results of the 30 largest mutual funds in the Lipper Small-Cap Core Funds Average. The Lipper Small-Cap Core Funds Average is a total return performance average of the mutual funds tracked by Lipper, Inc. that, by portfolio practice, invest at least 75% of their equity assets in companies with market capitalizations (on a three-year weighted basis) below Lipper's USDE small-cap ceiling. Small-cap core funds have more latitude in the companies in which they invest. These funds typically have an average price-to-earnings ratio, price-to-book ratio, and three-year sales-per-share growth value, compared to the S&P SmallCap 600 Index. The Lipper Small-Cap Core Funds Index is not what is typically considered to be an "index" because it tracks the performance of other mutual funds rather than the changes in the value of a group of securities, a securities index or some other traditional economic indicator. Investors cannot invest directly in any index.

³Standard deviation measures a Fund's variation around its mean performance; a high standard deviation implies greater volatility.

⁴Beta reflects the sensitivity of a Fund's return to fluctuations in its benchmark; a beta for a benchmark is 1.00: a beta greater than 1.00 indicates above average volatility and risk.

⁵Alpha is a coefficient measuring risk-adjusted performance, considering the risk due to the specific security, rather than the overall market. A positive alpha reflects relative risk-adjusted performance of the Fund versus its benchmark.

⁶R-Squared is a measure of how much a portfolio's performance can be explained by the returns from the overall market (or a benchmark index). The measure ranges from 0, which means that the Fund's performance bears no relationship to the performance of the benchmark, to 100, which means that the Fund's performance is perfectly synchronized with the performance of the benchmark.
