Causeway International Opportunities Composite Review for Month Ended November 30, 2021

Commentary Highlights

- Rising Covid hospitalizations and the Omicron variant appear to have sparked investor concerns of new lockdowns, which sent global equity markets into negative territory to finish November.
- · Although the emergence of Omicron presents uncertainty, we currently anticipate tighter liquidity conditions across much of the developed world in 2022. The pandemic recovery is both incomplete and uneven, but we are encouraged by solid global economic data and the near-term resolution of supply chain headwinds.
- Our experience over the last 21 months of the pandemic has reinforced our emphasis on financial strength and
 prospects for companies growing free cash flow from a fundamental perspective. While investors digest news of
 more pandemic-induced disruptions, we remain focused on, in our view, well-managed companies with the
 potential to thrive as economies reopen, and on those firms we believe are well-placed to pass on cost inflation
 through higher prices. We are finding these stocks in traditionally cyclical areas of the market, such as IT
 hardware, and defensive areas like pharmaceuticals.

Performance Review

Rising Covid hospitalizations and the Omicron variant appear to have sparked investor concerns of new lockdowns, which sent global equity markets into negative territory to finish November. The top performing markets in our investable universe were the United Arab Emirates, Chile, the Philippines, Taiwan, and the Czech Republic. The worst performing markets were Argentina, Turkey, Poland, Russia, and Spain. The best performing sectors in the MSCI ACWI ex US Index ("Index") were information technology, communication services, and utilities. The worst performing sectors were energy, financials, and consumer discretionary. Every major currency except the Japanese yen depreciated versus the US dollar during the period, thus diminishing overall returns on overseas assets for US dollar-based investors.

The Portfolio underperformed the Index during the month, due primarily to stock selection, and in particular the portion of the portfolio exposed to travel and leisure. Fund holdings in the materials, banks, capital goods, transportation, and insurance industry groups detracted from performance relative to the Index. Holdings in the consumer durables & apparel, consumer services, semiconductors & semi equipment, and household & personal products industry groups, as well as an underweight position in the diversified financials industry group, offset a portion of the underperformance. The largest detractor from absolute performance was jet engine manufacturer, Rolls-Royce Holdings Plc (United Kingdom). Additional top detractors included business software & services provider, SAP SE (Germany), low-budget airline, Ryanair Holdings (Ireland), life insurer, Prudential Plc (United Kingdom), and automobile manufacturer, Volkswagen AG (Germany). The top contributor to return was luxury goods manufacturer & retailers, Compagnie Financiere Richemont (Switzerland). Additional top contributors included semiconductor engineer, MediaTek, Inc. (Taiwan), circuit board manufacturer, Unimicron Technology Corp. (Taiwan), ecommerce company, Jd.com (Hong Kong), and semiconductor manufacturer, United Microelectronics Corp. (Taiwan).

Economic Outlook

IHS Markit Composite Purchasing Managers' Index ("PMI") November readings for the US, the Eurozone, and the UK remained firmly in expansionary territory and Japan's Composite PMI rose at the strongest rate in three years. Solid gains in manufacturing suggested that supply shocks that were buffeting industries globally abated somewhat during the month—

although the new Covid-19 variant may slow recovery. In the US, the Consumer Price Index jumped 6.2% year-over-year in October, but retail sales also grew 1.7% as labor market strength offset some of the inflationary pressures. US Federal Reserve ("Fed") Chairman Powell admitted that US inflation may persist if supply chain disruptions inhibit supply and demand remains strong. The Fed began tapering monthly bond purchases in November and plans to reduce these to zero by March 2022. We currently anticipate liquidity conditions to tighten across much of the developed world in 2022. In the Eurozone, private sector activity rebounded, with the Composite PMI rising from 54.2 in October to 55.8 in November with rising inflation. However, the latest Covid wave is acutely impacting Northern European countries with rising hospitalizations and the reintroduction of mobility restrictions. Germany formed a political coalition and announced ambitious climate goals. We believe the planned acceleration of coal-fired power generation closures in Germany by 2030 would be advantageous for utilities providers transforming their operations towards renewables. In the UK, economic momentum stayed strong as the country has been less affected by Continental Europe's recent surge in Covid hospitalizations. Despite a strengthening labor market, the Bank of England held interest rates steady in November amid the opacity of Omicron's impact.

In China, the November NBS Manufacturing PMI delivered welcome signs of improving output and easing supply pressures, rising to 50.1. Demand in October was resilient in both exports (which rose 27% year-over-year) and domestic activity, as retail sales increased 4.7% year-over-year. Regulatory activity was quieter than seen during the summer and early fall of 2021, but the research team at our Shanghai-based subsidiary suggests that Chinese authorities' actions in response to concerns over financial leverage and antitrust considerations may persist. The Omicron variant has likely spread to multiple countries and poses a greater threat to emerging markets ("EM") than most developed markets, where vaccination rates are higher on average. Two emerging markets in which we are overweight, Taiwan and South Korea, should fare relatively well compared to their EM peers as both have strong track records of combating Covid-19. China has also demonstrated effective virus response, but has relied more heavily on economic lockdowns.

Equity Allocation Model Update

We use a proprietary quantitative equity allocation model that assists the portfolio managers in determining the weight of emerging versus developed markets in the Fund. Our allocation relative to the weight of emerging markets in the Index is currently underweight. We identify five primary factors as most indicative of the ideal allocation target: valuation, quality, earnings growth, macroeconomic, and risk aversion. Valuation is currently positive for emerging markets in our model. Our quality metrics, which include such measures as profit margins and return on equity, are negative. Our earnings growth factor is negative, and our macroeconomic factor is negative for emerging markets. Lastly, our risk aversion factor is neutral in our model.

Investment Outlook

In our view, the developed world is significantly better prepared to weather the latest Covid wave. Major vaccine producers have indicated that they have mechanisms to develop boosters targeting a new variant in as little as three months. The emergence of Omicron, however, does highlight that progress against Covid proceeds in fits and starts. Market jitters and short-termism by investors may bring us investment opportunities in companies facing growth headwinds from lockdowns. Those developed market companies that used 2020 and 2021 to enhance liquidity and financial strength should be well-positioned to ride economic expansion associated with the reopening of geographic borders and associated economic activity. Our experience over the last 21 months of the pandemic has reinforced our emphasis on financial strength and prospects for companies growing free cash flow from a fundamental perspective. While investors digest news of more pandemic-induced disruptions, we remain focused on, in our view, well-managed companies with the potential to thrive as economies reopen, and on those firms we believe are well-placed to pass on cost inflation through higher prices. We expect many of our developed market portfolio companies to meaningfully increase capital returns to shareholders via dividends and share buybacks. As central banks remove excess liquidity, stocks offering income and near-term earnings may regain popularity and enjoy a valuation upswing.

Earnings upgrades in emerging markets have lagged developed markets. Within emerging markets, the strongest sectors were

energy, financials, and information technology. All three cyclical sectors reflect analyst optimism that global growth will continue to improve. Communication services, real estate, and consumer discretionary experienced the weakest earnings revisions. The markets with the strongest net upgrades were Russia, Turkey, UAE, and Saudi Arabia. Russia, UAE, and Saudi Arabia are oil-linked economies that have benefitted from strong oil prices. For the emerging markets portion of the portfolio, we continue to emphasize valuation in our multi-factor investment process. The MSCI EM Value Index trades at a 53% discount relative to the MSCI EM Growth Index on a next-twelve-month price-to-earnings basis. Offering substantial discounts and attractive dividend yields, we believe select emerging market value stocks provide compelling risk-adjusted return potential.

The return attributed to a factor is the difference between the equally weighted average return of the highest ranked quintile of companies in the strategy's investible universe based on that factor and that of the lowest ranked quintile of companies.

Notes:

Causeway Capital Management LLC ("Causeway") claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Causeway has been independently verified for the periods June 11, 2001 through December 31, 2019.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. The International Opportunities Composite has been examined for the periods June 30, 2007 through December 31, 2019. The verification and performance examination reports are available upon request.

The Firm, Causeway, is organized as a Delaware limited liability company and began operations in June 2001. It is registered as an investment adviser with the U.S. Securities and Exchange Commission under the Investment Advisers Act of 1940. Causeway manages international, global, and emerging markets equity assets for institutional clients including corporations, pension plans, sovereign wealth funds, superannuation funds, public retirement plans, Taft-Hartley pension plans, endowments and foundations, mutual funds and other collective investment vehicles, charities, private trusts and funds, wrap fee programs, and other institutions. The Firm includes all discretionary and non-discretionary accounts managed by Causeway.

The International Opportunities Composite includes all U.S. dollar denominated, discretionary accounts in the international opportunities strategy

that are not constrained by socially responsible investment restrictions. The international opportunities strategy seeks long-term growth of capital through investment primarily in equity securities of companies in developed and emerging markets outside the U.S. using Causeway's asset allocation methodology to determine developed and emerging weightings, and using Causeway's international value equity strategy or Causeway International Value Fund for the developed portion of the portfolio and Causeway's emerging markets strategy or Causeway Emerging Markets Fund for the emerging markets portion of the portfolio. The international value equity strategy seeks long-term growth of capital and income through investment primarily in equity securities of companies in developed countries located outside the U.S. The emerging markets equity strategy seeks long-term growth of capital through investment primarily in equity securities of companies in emerging markets. New accounts are included in the International Opportunities Composite after the first full month under management. Terminated accounts are included in the International Opportunities Composite through the last full month under management. A complete list and description of Firm composites is available upon request.

Account returns are calculated daily. Monthly account returns are calculated by geometrically linking the daily returns. The return of the International Opportunities Composite is calculated monthly by weighting monthly account returns by the beginning market values. Valuations and returns are computed and stated in U.S. dollars. Returns include the reinvestment of interest, dividends and any capital gains. Returns are calculated gross of withholding taxes on dividends, interest income, and capital gains. The Firm's policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. Past performance is no guarantee of future performance. Composite dispersion, if applicable, is calculated using the equal-weighted standard deviation of all portfolios that were included in the International Opportunities Composite for the entire year. The three-year annualized ex-post standard deviation quantifies the variability of the composite or benchmark returns over the preceding 36-month period.

The International Opportunities Composite's benchmark is the MSCI ACWI ex USA Index, which is a free float-adjusted market capitalization weighted index, designed to measure the equity market performance of developed and emerging markets excluding the U.S. market. The Index is gross of withholding taxes, assumes reinvestment of dividends and capital gains, and assumes no management, custody, transaction or other expenses. Accounts in the International Opportunities Composite may invest in countries not included in the MSCI ACWI ex USA Index, and may use different benchmarks.

Gross-of-fees returns are presented before management, performance and custody fees but after trading expenses. Net-of-fees returns are presented after the deduction of actual management fees, performance-based fees, and all trading expenses, but before custody fees. For bundled fee portfolios, net-of-fees returns are presented after the deduction of actual management fees, all trading expenses, custody fees, and fund accounting fees. Causeway's basic management fee schedules are described in its Firm brochure pursuant to Part 2 of Form ADV. Prior to July 2020, the basic separate account annual fee schedule for international opportunities assets under management was: 0.75% of the first \$100 million; 0.65% of the next \$150 million, and 0.55% thereafter. Beginning in July 2020, the basic separate account annual fee schedule for international opportunities assets under management is: 0.65% of the first \$200 million and 0.50% thereafter. Accounts in the International Opportunities Composite may have different fee schedules, and certain accounts may pay performance-based fees or bundled fees. Bundled fees include management, custody, and fund accounting fees.

MSCI has not approved, reviewed or produced this report, makes no express or implied warranties or representations, and is not liable whatsoever for any data in the report. You may not redistribute the MSCI data or use it as a basis for other indices or investment products.

Additional Important Disclosures

Causeway was founded in June 2001.

Data, except total strategy assets and composite performance, is based on a representative account in the International Opportunities strategy.

Source: Factset. Wtd Avg Mkt Cap is a weighted average of the total market capitalization of stocks in the portfolio or index. FY2 P/E is the weighted harmonic average 2-year analysts' consensus forecast price-to-earnings ratio. Price to earnings is a ratio for valuing a company that measures its current share price relative to its per-share earnings. Price-to-book (P/B) value evaluates a firm's market value relative to its book value and is a weighted harmonic average. Return on Equity measures how efficiently a company is generating income from the equity investments of its shareholders. Return on Equity is calculated as a weighted average, winsorized using maximum Return on Equity figures at 3 standard deviations from the mean (winsorization is a statistical technique intended to remove the impact of outliers). Dividend Yield is an average percentage of return determined by dividing the amount of the annual dividends per share by the current net asset value.

Attribution charts show where the Portfolio's investments performed better or worse than the benchmark index during the period. Attribution is based on the return of the Portfolio's holdings gross of management fees.

Industry group allocation is based on the equity portion of the portfolio (i.e., excluding cash).

The MSCI ACWI ex US Value Index is a subset of this index, and targets 50% coverage, with value investment style characteristics for index construction using three variables: book value to price, 12-month forward earnings to price, and dividend yield. The indices are gross of withholding

taxes, assume reinvestment of dividends and capital gains, and assume no management, custody, transaction or other expenses. It is not possible to invest directly in an index.

Holdings are subject to change.

The securities identified and described above do not represent all of the securities purchased, sold or recommended for client accounts. The reader should not assume that an investment in the securities identified was or will be profitable. Past performance does not guarantee future results.
