

JOHCM International Select Fund

Fund strategy

The Fund invests, under normal market conditions, primarily in equity securities of companies headquartered outside the U.S., including those in emerging market countries. The Fund Managers utilize a core investment style with a modest growth tilt and may invest in companies across the market capitalization range in order to achieve the Fund's objective. The Fund Managers seek to make investments in non-US listed companies based on a multi-dimensional investment process that considers growth, valuation, price-trend, and beta.

The performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The Fund's current performance may be lower or higher than the performance data quoted. Investors may obtain performance information current to the most recent month-end, within 7 business days at www.johcm.com or by calling 1-866-260-9549 or 1-312-557-5913.

Returns for periods of 1 year and less are not annualized. Returns shown, unless otherwise indicated, are total returns, net of fees, with dividends and income reinvested. Fee waivers are in effect; if they had not been in effect performance would have been lower. Historical performance of the International Select Fund for Class II Shares prior to their inception is based on the performance of Class I Shares. The performance of Class II Shares has been adjusted to reflect differences in expenses.

The MSCI EAFE Index (Europe, Australasia, Far East) is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the US & Canada. Any indices mentioned are unmanaged statistical composites of stock market performance. Investing in an index is not possible.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. Morningstar rankings are based on total returns. The Morningstar Percentile Ranking compares a Fund's Morningstar risk and return scores with all the Funds in the same Category, where 1% = Best and 100% = Worst. Please see page 4 for complete disclosure on how the Morningstar Ratings™ are calculated.

Fund manager's commentary

- During the quarter, most of our outperformance was due to positive stock selection in the Technology, Materials and Health Care sectors.
- We are now 70% bullish and 30% bearish, but we expect significant volatility and rotation in 2022.
- If policy makers recognise and react to slowing growth, we probably move to 80% bullish, 20% bearish.

We outperformed the index in Q4. During the quarter, most of our outperformance was due to positive stock selection in the Technology, Materials and Health Care sectors. The top performers were technology names MediaTek, SK Hynix, Tokyo Electron and Accenture. On the negative side, THG, Cyberagent, Yahoo and Vestas detracted from returns.

Many investors seem dogmatically stuck on the 'Value' versus 'Growth' debate when the truth is pragmatically somewhere in the middle, depending on the business cycle. This is why we combine the Growth, Value and Momentum factors over the cycle. 2021 was "a game of two halves" with Value outperforming until the end of May and then Growth outperforming to finish the year roughly equal. The Momentum factor significantly underperformed as it was whipsawed by these factor rotations between Value and Growth during the year.

Slower global economic growth and earnings growth lies ahead and markets are beginning to worry about stagflation (slowing growth with rising inflation). A moderation in global growth rates in 2022 (from recovery boom to steady growth) will probably allow supply chains to catch up and inflation to fall.

Current stagflation concerns are therefore probably overstated and it is probably still too early to get very defensive. The defensive SHUT sectors (Staples, Healthcare, Utilities and Telcos) are still not really outperforming, and credit spreads remain well-behaved. So, as long as fiscal and monetary

policy tightening does not happen too quickly, we should see one of the biggest equity bull markets continue.

Cyclicals are called cyclical for a reason, as most of their relative outperformance occurs earlier in the economic cycle when they have the best relative earnings growth. Stable growth usually outperforms during the mid to late cycle as by this point they have the best relative earnings growth. We do not see any reason for this historical early to mid cycle shift to change, from early cyclicals (value) to mid cycle compounders (growth), so we are positioned accordingly.

We are now 70% bullish and 30% bearish, but we expect significant volatility and rotation in 2022 across our three scenarios below:

- Scenario 1: still 40% - Equity markets rally with the old leadership, i.e. stable growth & high quality stocks as growth slows.
- Scenario 2: 30% (was 35%) - Equity markets rally with new leadership, i.e. cyclicals & financials if growth is better than expected
- Scenario 3: 30% (was 25%) - Equity markets fall if growth slows faster than expected or if fiscal/monetary policy is tightened too fast/much.

If policy makers recognise and react to slowing growth, we probably move to 80% bullish, 20% bearish (45/35/20), if not we might get more bearish.

Risk considerations

The Fund invests in International and Emerging Markets. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in Emerging Markets. Such risks include new and rapidly changing political and economic structures, which may cause instability; underdeveloped securities markets; and higher likelihood of high levels of inflation, deflation or currency devaluations.

Emerging Markets involve heightened risks related to the same factors, in addition to those associated with their relatively small size and lesser liquidity.

The small and mid cap companies the Fund may invest in may be more vulnerable to adverse business or economic events than larger companies and may be more volatile; the price movements of the Fund's shares may reflect that volatility.

Fund holdings are subject to change at any time and are not recommendations to buy or sell any security. A list of all holdings during the period, corresponding performance contributions and attributions, and the calculation methodology is available upon request.

Modern portfolio statistics

Statistics	5Y	10Y	
Correlation to benchmark	0.90	0.87	Correlation to benchmark is a measure of the strength of the relationship between a fund and its index.
Sharpe ratio	0.95	0.90	Sharpe ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk.
Alpha	5.75	5.70	Alpha is a measurement of a fund's risk-adjusted performance against its index.
Standard deviation	13.08	13.04	Standard deviation is a statistical measure of distribution around an average, which depicts how widely returns varied over a certain period of time. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility.
Tracking error (%)	6.57	6.89	Tracking error is a measure of how closely a Fund's performance follows its index.
Upside capture ratio	91	93	Upside and downside capture measures a manager's ability to generate excess return above the benchmark return in up markets and retain more of the excess return in down markets. The upside/downside capture ratio is the Fund's up/down market return divided by the index's up/down market return and equals the linked returns for all quarters in which the index return was greater/less than zero.
Downside capture ratio	62	65	

Buying and selling fund shares

You can buy or sell shares of the Fund on any business day that the Fund is open through your broker or financial intermediary, or by mail or telephone. You can pay for shares by wire.

JOHCM Funds
c/o The Northern Trust Company
P.O. Box 4766
Chicago, IL 60680-4766

Telephone
1-866-260-9549 (toll free) or 1-312-557-5913

The minimum investment for Class I Shares is \$0, and Class II Shares is \$0. There is no minimum for additional investments. May be subject to platform minimums if purchased through a brokerage account.

Effective July 15, 2015 the JOHCM International Select Fund will be publicly offered on a limited basis only. Please refer to the prospectus for additional details.

Payments to broker-dealers and other financial intermediaries

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Dividends, capital gains and taxes

The Fund intends to make distributions that are generally taxable as ordinary income or capital gains, except when your investment is in an IRA, 401(k) or other tax-advantaged investment plan. However, you may be subjected to tax when you withdraw monies from a tax-advantaged plan.

Prospectus offer

An investor should consider the Fund's investment objectives, risks, and charges and expenses carefully before investing or sending any money. This and other important information about the Funds can be found in the prospectus or summary prospectus which can be obtained at www.johcm.com or by calling

1-866-260-9549 or 1-312-557-5913. Please read the prospectus or summary prospectus carefully before investing. Morningstar Ratings™

©2021 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary.
