Index represents the MSCI World Index<sup>SM</sup>.

Performance for Class A Shares, Class I Shares and Class T Shares that includes periods prior to 6/5/17 reflects the performance of one or more share classes of a predecessor fund, adjusted, where applicable and permitted, for differing fees and expenses. See the Fund's prospectus for further details.

Returns include reinvestment of dividends and capital gains. Returns greater than one year are annualized.

Holdings are subject to change without notice.

**There is no assurance the stated objective(s) will be met.**

Equity country, regional, sector and industry weights primarily based on MSCI and GICS classifications. Fixed income country, regional, sector and industry weights primarily based on Bloomberg classifications.

**Investing involves risk, including the possible loss of principal and fluctuation of value.**

**Foreign securities** are subject to additional risks including currency fluctuations, political and economic uncertainty, increased volatility, lower liquidity and differing financial and information reporting standards, all of which are magnified in emerging markets.

**Increased portfolio turnover** may result in higher expenses and potentially higher net taxable gains or losses.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

**MSCI World Index<sup>SM</sup>** reflects the equity market performance of global developed markets. **85% MSCI ACWI ex-US High Div Yld / 15% MSCI USA High Div Yld Index** is an internally-calculated, hypothetical combination of total returns from the MSCI All

Country World ex-USA High Dividend Yield Index (85%) and the MSCI USA High Dividend Yield Index (15%). The underlying indices reflect the performance of higher dividend yield large and mid-cap equities from (i) global developed and emerging markets excluding the U.S. and (ii) the U.S. markets. **Alpha** compares risk-adjusted performance relative to an index. Positive alpha means outperformance on a risk-adjusted basis. **Beta** measures the volatility of a security or portfolio relative to an index. Less than one means lower volatility than the index; more than one means greater volatility. **R-squared (R<sup>2</sup>)** measures the relationship between portfolio and index performance on a scale of 0.00 (0%) to 1.00 (100%). A higher R<sup>2</sup> indicates more of the portfolio's performance is affected by market movements and vice versa. **Standard Deviation** measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk. **Active Share** represents the portion of portfolio holdings that differ from an index. **Turnover** is a measure of portfolio trading activity. Higher turnover may indicate higher transaction costs and vice versa.
