Quarterly Fact Sheet | Institutional Class: GSPFX

ABOUT THE FUND

OVERVIEW

- Value weighted long-only U.S. equity strategy that selects primarily from the S&P 500 investment universe

INVESTMENT OBJECTIVE AND STRATEGY

- Seeks long-term capital appreciation by investing in long positions of equity securities that comprise the S&P 500 Index in weights based on Gotham's assessment of value and the security's weight in the index

COMPETITIVE ADVANTAGES

Experienced Management

The fund is managed by Joel Greenblatt and Robert Goldstein, who have over 50 years of combined hedge fund management experience.

Proprietary Research Methodology

Gotham follows a disciplined process of researching and valuing companies, rebalancing positions daily to take advantage of changing stock prices and fundamental information.

Portfolio Diversification and Risk Management

Our portfolios are highly diversified with hundreds of positions (not equally weighted). Risks are managed daily through a systematic process developed by our team of research professionals.

Tax Goal²

We aim to achieve long term capital gains treatment for the vast majority of any realized gains.

IMPORTANT INFORMATION

¹ Inception Date: December 30, 2016.

² A preference for long-term gains is an objective established and followed by Gotham, is not formal policy of the fund, and is subject to change at any time.

The performance data quoted represents past performance. Past performance is no guarantee of future results. Investment return and principal value will fluctuate so that an investor's shares upon redemption may be worth more or less than their original cost. The performance quoted does not reflect a 1% redemption fee on shares redeemed within 30 days of purchase. Returns would have been lower if certain expenses had not been reduced or reimbursed. Current performance may be lower or higher than the performance quoted here. To obtain performance current to the most recent month-end, please call 877-974-6852.

The S&P 500 Total Return Index is a market capitalization-weighted index of 500 large-capitalization stocks commonly used to represent the U.S. equity market. Returns for the S&P 500 Total Return Index include the reinvestment of income and do not include transaction fees, management fees or any other costs. The S&P 500 Value Total Return Index is a market-capitalization-weighted index composed of large-capitalization U.S. equities that exhibit value characteristics. The performance and volatility of the fund will be different than those of the indexes. The indexes are unmanaged and investors cannot invest directly in the indexes.

The Morningstar RatingTM ("star rating") is calculated for funds with at least a three-year history. Exchange-traded and open-end mutual funds are combined into a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each fund category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar RatingTM is a weighted average of the performance figures associated with a fund's 3-, 5-, and 10-year (if applicable) Morningstar RatingTM metrics. In the Large Blend category, GSPFX was rated 3 stars among 1244 funds for the 3 year period ending 12/31/2021 and 4 stars among 1109 funds for the 5 year period ending 12/31/21.

INVESTMENT PROCESS

- The Co-CIOs and their team of equity analysts employ Gotham's proprietary analytical framework to evaluate stocks within the coverage universe on measures of absolute and relative value.
- Gotham's equity research and risk controls are used to select long stock portfolios from primarily the S&P 500 universe.
- The portfolio is rebalanced daily to weight most heavily those stocks priced at the largest discount to Gotham's assessment of value.
- In general, as a company appears cheaper, its weight in the portfolio increases.
- Risk for the fund is managed by limiting concentration in any one company, industry or sector. In addition, position sizes are managed such that the portfolio does not deviate too much from the underlying index over annual periods.

IMPORTANT INFORMATION

Mutual fund investing involves risks, including possible loss of principal. It is anticipated the fund will frequently adjust the size of its positions and thus may experience high portfolio turnover which may increase brokerage costs.
