Performance data represents past performance, which does not guarantee future results. Current performance may differ from figures shown. The fund's investment return and principal value will change with market conditions, and you may have a gain or a loss when you sell your shares. Please call Franklin Templeton at (800) DIAL BEN/(800) 342-5236 or visit franklintempleton.com for the most recent month-end performance.

Net Asset Value (NAV) returns are based on the NAV of the ETF; Market Price returns are based upon the official closing price of the ETF's shares. Returns are average annualized total returns, except for those periods of less than one year, which are cumulative. Market Price returns are calculated using the closing price as of 1 p.m. Pacific time on each trading day (when NAV is normally determined for most funds), and do not represent the returns you would receive if you traded shares at other times.

Since shares of the Fund did not trade in the secondary market until after the Fund's inception, for the period from inception to the first day of secondary trading February 12, 2018, the NAV of the Fund is used as a proxy for the Market Price to calculate market returns.

Cash & Cash Equivalents	0.20		

What Are the Risks?

All investments involve risks, including possible loss of principal. Stock prices fluctuate, sometimes rapidly and dramatically, due to factors affecting individual companies, particular industries or sectors, or general market conditions. Special risks are associated with foreign investing, including currency fluctuations, economic instability and political developments. Investments in developing markets involve heightened risks related to the same factors, in addition to those associated with these markets' smaller size, lesser liquidity and lack of established legal, political, business and social frameworks to support securities markets. There are special risks associated with investments in India, including exposure to currency fluctuations, less liquidity, expropriation, confiscatory taxation, and exchange control regulations (including currency blockage). Investments in securities of Indian issuers involve risks that are specific to India, including certain legal, regulatory, political and economic risks. Because the fund invests its assets primarily in companies in a specific country or region the fund may also experience greater volatility than a fund that is more broadly diversified geographically. As a non-diversified fund, the fund may invest in a relatively small number of issuers which may negatively impact the fund's performance and result in greater fluctuation in the value of the fund's shares. These and other risks are discussed in the fund's prospectus.

Glossary

Price to Book: The price per share of a stock divided by its book value (i.e., net worth) per share. For a portfolio, the value represents a weighted average of the stocks it holds.

Price to Earnings (12-mo Trailing): The share price of a stock, divided by its per-share earnings over the past year. For a portfolio, the value represents a weighted average of the stocks it holds.

Standard Deviation: A measure of the degree to which a fund's return varies from the average of its previous returns. The larger the standard deviation, the greater the likelihood (and risk) that a fund's performance will fluctuate from the average return.

Important Information

Investors should carefully consider a fund's investment goals, risks, charges and expenses before investing. To obtain a summary prospectus and/or prospectus, which contains this and other information, talk to your financial professional, call us at (800) DIAL BEN/342-5236 or visit franklintempleton.com. Please carefully read a prospectus before you invest or send money.

ETFs trade like stocks, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.

Information is historical and may not reflect current or future portfolio characteristics. All portfolio holdings are subject to change.

Indexes are unmanaged, and one cannot invest directly in an index. They do not reflect any fees, expenses or sales charges.
