\*ETF implied liquidity is a representation of how many shares can potentially be traded daily in an ETF as portrayed by the creation unit. This is defined as the smallest value of the IDTS (Implied Daily Tradable Shares) for each holding in the creation unit.

**NAV** (net asset value) is the value of one share of the Fund calculated daily. The NAV return is based on the NAV of the Fund. It may not reflect the actual return for the investor.

**Market Price** is the price investors can buy and sell ETF shares for in the stock market and is used to calculate market return. It is based on the price at the listed exchange market close. This is when NAV is determined for most ETFs. If shares trade at another time, the return may differ. Market and NAV returns assume that dividends and capital gain distributions have been reinvested in the Fund at Market Price and NAV, respectively.

**Weighted average market cap** is the sum of each company’s weight multiplied by its market cap.

**Dividend yield** is the weighted average of each underlying holdings’ dividend yield. There is no guarantee dividends will be paid.

**Price to funds from operations** is a measure of the cash generated by a REIT; real estate companies use FFO as an operating performance benchmark. FFO is calculated by adding depreciation and amortization to earnings and then subtracting any gains on sales.

**The FTSE Nareit All Equity REITs Index** is a free-float adjusted, market capitalization-weighted index of U.S. equity REITs. Constituents of the index include all tax-qualified REITs with more than 50 percent of total assets in qualifying real estate assets other than mortgages secured by real property.
