

VictoryShares USAA Core Intermediate-Term Bond ETF

As of December 31, 2021

Offers core intermediate-term bond fund exposure that seeks high current income without undue risk to principal.

Invests primarily in investment-grade corporate debt and U.S. government securities with an average portfolio maturity between 3-10 years.

Why UITB?

- Seeks above average income through a yield focused portfolio, built bond-by-bond, using fundamental bottom-up analysis
- Actively managed by an experienced taxable fixed income team
- Independent research allows for a differentiated, deeper understanding of credit risk

Past performance does not guarantee future results. The performance data quoted represents past performance and current performance may be lower or higher. The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. To obtain performance information current to the most recent month-end, visit www.victoryshares.com. ETF shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund.

Brokerage commissions will reduce returns. Market price returns are based on price of the last reported trade on the fund's primary exchange. If you trade your shares at another time, your return may differ. Returns include reinvestment of dividends and capital gains. Performance for periods greater than one year is annualized. Fee waivers and/or expense reimbursements were in place for some or all periods shown, without which, fund performance would have been lower.

AA	7.7	3.3
A	13.7	11.8
BBB	28.7	12.6
< BBB	1.9	0.0
Unrated	0.8	1.3

The credit quality chart reflects the highest long-term rating from a Nationally Recognized Statistical Rating Organization (NRSRO), with the four highest long-term credit ratings labeled, in descending order of credit quality, AAA, AA, A and BBB. These categories represent investment-grade quality. Nationally Recognized Statistical Rating Organization (NRSRO) that provide ratings used here are Standard & Poor's, Moody's Investors Service, and Fitch Ratings apply to the credit worthiness of the issuers of the underlying securities and not to the fund or its shares. Ratings are subject to change.

Carefully consider a fund's investment objectives, risks, charges and expenses before investing. To obtain a prospectus or summary prospectus containing this and other important information, visit www.vcm.com/prospectus. Read it carefully before investing.

All investing involves risk, including the potential loss of principal.

The Fund has the same risks as the underlying securities traded on the exchange throughout the day. Redemptions are limited, and commissions are often charged on each trade. ETFs may trade at a premium or discount to their net asset value. Fixed income securities are subject to interest rate, inflation, credit and default risk. The bond market is volatile. Bonds and bond funds will decrease in value as interest rates rise and vice versa. Credit risk refers to the possibility that debt issuers may not be able to make principal and interest payments or may have their debt downgraded by ratings agencies. High yield securities may be more volatile, be subject to greater levels of credit or default risk, and may be less liquid and more difficult to sell at an advantageous time or price than higher-rated securities of similar maturity. Mortgage-backed securities ("MBS") are subject to credit, prepayment and extension risk and may react differently to changes in interest rates than other bonds. Small movements in interest rates may quickly and significantly reduce the value of certain MBS. Derivatives may not work as intended and may result in losses. The value of your investment is also subject to geopolitical risks such as wars, terrorism, environmental disasters, and public health crises; the risk of technology malfunctions or disruptions; and the responses to such events by governments and/or individual companies.

Fund holdings and sector allocations are subject to change, may differ from the Index, and should not be considered investment advice.

Average effective duration is a duration calculation for bonds that have embedded options. This measure of duration takes into account the fact that expected cash flows will fluctuate as interest rates change and is, therefore, a measure of risk. **Duration** is a weighted average of the maturity of all income streams from a bond or portfolio of bonds. Generally, the higher the duration, the more sensitive the bond or bond portfolio to changes in interest rates. **Market capitalization** is the total dollar value of all outstanding shares computed as number of shares times current market price. **Market price** is the price of the last reported trade on a fund's primary exchange. **Net asset value or NAV** is a fund's

total assets minus its total liabilities, divided by the number of outstanding shares. **Premium/discount %** indicates whether an ETF is currently trading at a higher or lower price than the current value of the securities in that portfolio. **Credit quality** ratings are obtained using Bloomberg Barclays methodology using ratings derived from Moody's Investors Service (Moody's), Standard & Poor's (S&P) and Fitch Ratings (Fitch). When ratings from all three agencies are available, the median rating is used. When ratings are available from two of the agencies, the lower rating is used. When one rating is available, that rating is used. Victory Capital Management does not evaluate these ratings but simply assigns the to the appropriate credit quality category as determined by the rating agency. **Subsidized yield** reflects fee waivers/reimbursements/limits in effect. **30 Day SEC yield** is a standard yield calculation developed by the SEC for bond funds. The yield is calculated by dividing the net investment income per share earned during the 30-day period by the maximum offering price per share on the last day of the period. The yield figure reflects the dividends and interest earned during the 30-day period, after the deduction of the fund's expenses. It is sometimes referred to as "SEC 30-Day Yield" or "Standardized Yield."

The Bloomberg U.S. Aggregate Bond Index (Bloomberg US Aggregate) measures the investment grade, USD-denominated, fixed-rate taxable bond market. The index includes Treasuries, government-related and corporate securities, MBS, ABS and CMBS.

Net expense ratio reflects the contractual waiver and/or reimbursement of management fees through October 31, 2022.
