

# ActiveBeta® International Equity ETF

As of February 28, 2022

Seeks to track performance of the Goldman Sachs ActiveBeta® International Equity Index

## Opportunity to Outperform the Market

Each ActiveBeta® ETF follows a performance-seeking methodology that aims to acquire stocks based on four well-established attributes of performance: good value, strong momentum, high quality, and low volatility.

## Diversifies Your Portfolio

ActiveBeta® ETFs are one more option for investors to diversify their portfolios with equity exposure focusing on four distinct performance attributes.

## Lower Cost

ActiveBeta® ETFs are among the most competitively priced ETFs on the market. For example, the cost of our ActiveBeta® International Equity ETF is 25 basis points, compared to the industry average for smart beta ETFs of 43 basis points\*

Dividend Yield#	3.07

**The returns represent past performance. Past performance does not guarantee future results. The Fund's investment return and principal value will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance quoted above. Please visit our Web site at: [www.GSAMFUNDS.com/ETFs](http://www.GSAMFUNDS.com/ETFs) to obtain the most recent month-end returns.** Performance reflects cumulative total returns for periods of less than one year and average annual total returns for periods of greater than one year. All Fund performance data reflect the reinvestment of distributions. Total returns are calculated assuming purchase of a share at the market price or NAV on the first day and sale of a share at the market price or NAV on the last day of each period reported. The Total Returns Based on NAV and Market Price do not reflect brokerage commissions in connection with the purchase or sale of Fund shares, which if included would lower the performance shown above.

The NAV used in the Total Return calculation assumes all management fees and operating expenses incurred by the Fund. Market Price returns are based upon the last trade as of 4:00pm EST and do not reflect the returns you would receive if you traded shares at other times. The first day of secondary market trading is typically several days after the fund inception of investment operations date; therefore, the NAV of the Fund is used as a proxy for the period from inception of investment operations to the first day of secondary market trading to calculate the Market Price returns.

**Under the management agreement for Goldman Sachs ActiveBeta® International Equity ETF (the "Fund"), Goldman Sachs Asset Management, L.P. (the "Investment Adviser" or "GSAM") will be responsible for substantially all the expenses of the Fund, excluding payments under the Fund's 12b-1 plan (if any), interest expenses, taxes, acquired fund fees and expenses, brokerage fees, costs of holding shareholder meetings, litigation, indemnification and extraordinary expenses.**

Net Asset Value is the market value of one share of the Fund. This amount is derived by dividing the total value of all the securities in the fund's portfolio, less any liabilities, by the number of fund shares outstanding. Market Price is the price at which the Fund's shares are trading on the NYSE Arca. The Market Price of the Fund's shares will fluctuate and, at the time of sale, shares may be worth more or less than the original investment or the Fund's then current net asset value. The Fund cannot predict whether its shares will trade at, above or below net asset value.

The Goldman Sachs ActiveBeta® International Equity Index ("the Index") is designed to deliver exposure to equity securities of developed market issuers outside of the United States. The Index seeks to capture common sources of active equity returns, including value (i.e., how attractively a stock is priced relative to its "fundamentals", such as book value or free cash flow), momentum (i.e., whether a company's share price is trending up or down), quality (i.e., profitability) and low volatility (i.e., a relatively low degree of fluctuation in a company's share price over time). The Index is reconstituted and rebalanced quarterly. It is not possible to invest directly in an unmanaged index.

Diversification does not protect an investor from market risk and does not ensure a profit.

\*"Smart beta" refers to quantitative index-based strategies. Source: Morningstar, as of June 30, 2020, 43 bps is the average fund fee for the Morningstar Foreign Large Blend Strategic Beta and 37 bps is the average fund fee in the Morningstar Foreign Large Blend Index category.

Fund holdings and allocations shown are unaudited, and may not be representative of current or future investments. Fund holdings and allocations may not include the Fund's entire investment portfolio, which may change at any time. Fund holdings should not be relied on in making investment decisions and should not be construed as research or investment advice regarding particular securities. Current and future holdings are subject to risk. Percentages may not sum to 100% due to rounding.

The MSCI World ex USA Index captures large and mid cap representation across 22 of 23 Developed Markets countries. It is not possible to invest directly in an unmanaged index.

The Weighted Average Market Cap represents the average value of the companies in the index or portfolio

PLEASE REFER TO THE PROSPECTUS FOR ADDITIONAL INFORMATION.**

# Goldman Sachs ActiveBeta® International Equity ETF

## To construct our ActiveBeta® Index we:

Start with the market capitalization weighted universe

Score each stock in the universe on four distinct factors: Value, Momentum, Quality and Low Volatility

Construct 4 factor indices by overweighting stocks with higher factor scores and underweighting or removing stocks with lower factor scores; constraining weights to remain broadly in line with the market

Combine these 4 factor indices equally to form the ActiveBeta® Index

Rebalance the ActiveBeta® Index quarterly, using a patent-pending technique to reduce turnover

Calendar Year Returns (%)	2016	2017	2018	2019	2020	2021

**The Goldman Sachs ActiveBeta® International Equity ETF** (the "Fund") seeks to provide investment results that closely correspond, before fees and expenses, to the performance of the Goldman Sachs ActiveBeta® International Equity Index (the "Index"), which delivers exposure to equity securities of developed market issuers outside of the United States and Canada, specifically in Europe, Australasia and the Far East. The Fund's investments are subject to **market risk**, which means that the value of the securities in which it invests may go up or down in response to the prospects of individual companies, particular sectors or governments and/or general economic conditions. **Foreign investments** may be more volatile and less liquid than investments in U.S. securities and are subject to the risks of currency fluctuations and adverse social, economic or political developments. Because the Fund may **concentrate its investments** in an industry or group of industries to the extent that the Index is concentrated, the Fund may be subject to greater risk of loss as a result of adverse economic, business or other developments affecting that industry or group of industries. The securities of **mid- and small-capitalization companies** involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. The Fund is not **actively managed**, and therefore the Fund will not generally dispose of a security unless the security is removed from the Index. The Index **calculation methodology** may rely on information based on assumptions and estimates and neither the Fund nor its investment adviser can guarantee the accuracy of the methodology's assessment of included issuers. **Performance may vary substantially from the performance of the Index** as a result of transaction costs, expenses and other factors. **Fund shares are not individually redeemable and are issued and redeemed by the Fund at their net asset value ("NAV") only in large, specified blocks of shares called creation units. Shares otherwise can be bought and sold only through exchange trading at market price (not NAV). Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns.**

**Investment terms:** The **Price to Book (P/B) ratio** is used to compare a stock's book value to its market value. It can be aggregated for groups of stocks. The **Price to Earnings (P/E) ratio** compares a stock's earnings in a specified fiscal period to its market value. It can be aggregated for groups of stocks. **Return on Equity (ROE)** is the amount of net income as a percentage of shareholders equity. **#Dividend Yield** is derived as a weighted average of the dividend yield of the underlying securities and is not a distribution payment made by the fund. The Morningstar information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; (3) does not constitute investment advice offered by Morningstar; and (4) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. © 2019 Morningstar, Inc. All Rights Reserved.

The Global Industry Classification Standard (GICS) was developed by and is the exclusive property and a service mark of Morgan Stanley Capital International Inc. (MSCI) and Standard & Poor's, a division of The McGraw-Hill Companies, Inc. (S&P) and is licensed for use by Goldman Sachs. Neither MSCI, S&P nor any other party involved in making or compiling the GICS or any GICS classifications makes any express or implied warranties or representations with respect to such standard or classification (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any of such standard or classification. Without limiting any of the foregoing, in no event shall MSCI, S&P, any of their affiliates or any third party involved in making or compiling the GICS or any GICS classifications have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

The method of calculation of the **30-Day Standardized Yield** is mandated by the Securities and Exchange Commission and is determined by dividing the net investment income per share earned during the last 30 days of the period by the maximum public offering price ("POP") per share on the last day of the period. This number is then annualized. The yield figure reflects the dividends and interest earned during the 30 day period, after the deduction of the fund's expenses.

The Investment Company Act of 1940 (the "Act") imposes certain limits on investment companies purchasing or acquiring any security issued by another registered investment company. For these purposes the definition of "investment company" **includes** funds that are unregistered because **they are excepted** from the definition of investment company by sections 3(c)(1) and 3(c)(7) of the Act. You should consult your legal counsel for more information.

The MSCI World ex USA Index was used by GSAM as the reference universe for selection of the companies included in the GS ActiveBeta® International Equity Index. MSCI Inc. does not in any way sponsor, support, promote or endorse the GS ActiveBeta® International Equity Index or the ActiveBeta® International Equity ETF. In no event shall any MSCI Party have any liability for any direct, indirect, special, incidental, punitive, consequential (including without limitation lost profits) or any other damages in connection with the MSCI World ex USA Index or the GS ActiveBeta® International Equity Index.
