Hypothetical Growth of \$10,000

As Of 02/28/2022

A hypothetical \$10,000 investment made in the fund ten years ago, or on commencement of operations for funds lacking a ten-year track record. Figures show monthly returns and include reinvestment of dividends and capital gains but do not reflect the effect of any applicable sales charges or redemption fees, which would lower these figures. This chart is not intended to imply any future performance of the fund.

Investment Objective

Seeks capital appreciation.

Strategy

Normally investing at least 80% of assets in stocks. Investing in either "growth" stocks or "value" stocks or both. Normally investing primarily in common stocks of leveraged companies (companies that issue lower-quality debt and other companies with leveraged capital structures).

Risk

Stock markets, especially foreign markets, are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. Fixed income investments entail interest rate risk (as interest rates rise bond prices usually fall), the risk of issuer default, issuer credit risk and inflation risk. Leverage can magnify the impact of adverse issuer, political, regulatory, market, or economic developments on a company. In the event of bankruptcy, a company's creditors take precedence over the company's stockholders. Although the companies that the fund invests in may be highly leveraged, the fund itself does not use leverage as an investment strategy.
