Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by visiting hennessyfunds.com. The performance for periods on or prior to 10/26/18 is that of the predecessor BP Capital TwinLine MLP Fund.

Must be preceded or accompanied by a current prospectus.

Each Morningstar category average represents a universe of funds with similar objectives.

Master Limited Partnerships (MLPs) and MLP investments have unique characteristics. The Fund does not receive the same tax benefits as a direct investment in an MLP.

A significant portion of the Midstream Fund's distributions to shareholders will be characterized as a "return of capital" because of its MLP investments. Please refer to the 19a-1 Notice sent to shareholders or Tax Forms 8937 for additional information regarding the composition of distributions. Final determination of a distribution's tax character will be made on Form 1099 DIV sent to shareholders each year.

------------------------------------	------

Mutual fund investing involves risk. Principal loss is possible. A non-diversified fund, one that may concentrate its assets in fewer holdings than a diversified fund, is more exposed to individual stock volatility than a diversified fund. Small and medium-capitalization companies may have more limited liquidity and greater price volatility than large-capitalization companies. Funds that concentrate in a single sector may be subject to a higher degree of risk. Energy-related companies are subject to specific risks, including fluctuations in commodity prices and consumer demand, substantial government regulation, and depletion of reserves. The prices of MLP units may fluctuate abruptly and trading volume may be low, making it difficult for the Fund to sell its units at a favorable price. MLP general partners have the power to take actions that adversely affect the interests of unit holders. Most MLPs do not pay U.S. federal income tax at the partnership level, but an adverse change in tax laws could result in MLPs being treated as corporations for federal income tax purposes, which could reduce or eliminate distributions paid by MLPs to the Fund. The Fund is treated as a regular corporation, or "C" corporation, for U.S. federal income tax purposes, and therefore, is subject to U.S. federal income tax on its taxable income at the graduated rates applicable to corporations (currently a maximum rate of 21%) as well as state and local income taxes. The Fund will not benefit from current favorable federal income tax rates on long-term capital gains, and Fund income and losses will not be passed on to shareholders. The Fund accrues deferred income taxes for future tax liabilities associated with the portion of MLP distributions considered to be a tax-deferred return of capital and for any net operating gains as well as capital appreciation of its investments. This deferred tax liability is reflected in the daily NAV and as a result, the Fund's after-tax performance could differ significantly from the underlying assets even if the pre-tax performance is closely tracked.

The Alerian US Midstream Energy Index is comprised of US energy infrastructure companies that earn the majority of their cash flow from midstream activities. The S&P 500[®] Index is an unmanaged index commonly used to measure the performance of U.S. stocks. One cannot invest directly in an index. Alerian US Midstream Energy Index is a servicemark of GKD Index Partners, LLC d/b/a Alerian ("Alerian"), and its use is granted under a license from Alerian. Alerian does not permit any party to rely upon and does not accept any liability for any errors, omissions, interruptions, or defects in the Alerian indexes or underlying data.

Distribution Rate reflects the investment income per share during the last 12 months divided by the share price at the end of the period, expressed as an annual percentage rate. It is calculated by annualizing the Fund's most recent distribution. The annualized dividend yield may not reflect the actual yield an investor would receive. **30-Day SEC Yield** is a standardized yield computed by dividing the net investment income per share earned during the past 30-day period by the share price at the end of the period, expressed as an annual percentage rate. The 30-Day SEC Yield should be regarded as an estimate of the Fund's rate of recent investment income, and it may not equal the Fund's actual distribution rate. **Past yields are no guarantee of future yields.** Investor: 30 day SEC Yield subsidized 0.58%; unsubsidized 0.45% as of 3/31/22. Subsidized yields reflect fee waivers in effect. Institutional: 30 day SEC Yield subsidized 0.82%; unsubsidized 0.81% as of 3/31/22. Subsidized yields reflect fee waivers in effect.

Fund holdings and sector weightings are subject to change and should not be considered a recommendation to buy or sell any security. Alpha measures the fund's excess return relative to the return of the benchmark. Beta measures the volatility of the fund compared to that of the benchmark. The beta of the benchmark is 1.00. Capture ratios measure the fund's overall performance in up markets (positive return periods) and down markets (negative return periods). Price/Earnings measures a stock's price per share compared to earnings. Price/Book measures a stock's price per share to book value.

The Hennessy Funds are distributed by Quasar Distributors, LLC.
