

Eaton Vance Greater India Fund

Focused on equity opportunities in the India region.

The Fund

The Fund seeks long-term capital appreciation by investing primarily in securities of companies that are located in India or surrounding countries of the Indian subcontinent, possibly including Pakistan and Sri Lanka. The Fund invests in companies with a broad range of market capitalizations including smaller companies.

The Approach

The Fund's investments are selected using a strong valuation discipline based on industry specific metrics, to purchase what the Fund manager believes are well-positioned, cash-generating businesses run by shareholder-oriented management teams. From a valuation perspective, the Fund manager uses proprietary estimates to determine underappreciated and undervalued companies. Allocation of the Fund's investments is determined by the Fund manager's assessment of a company's upside return potential relative to downside risk and other fund positions. Impact on sector and industry weightings is also considered.

The Features

The Fund provides investors access to a range of companies with the potential to benefit from India's competitive advantages in the global economy including its political stability, well-developed banking system, vibrant capital market, tradition of education, and strong pool of scientific and technical labor. The Fund has the ability to invest in companies with a broad range of market capitalizations.

Benchmark: MSCI India Index²

Past performance is no guarantee of future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Performance is for the stated time period only; due to market volatility, the Fund's current performance may be lower or higher than quoted. For the Fund's performance as of the most recent month-end, please refer to eatonvance.com. Returns are historical and are calculated by determining the percentage change in net asset value (NAV) with all distributions reinvested. Returns for other classes of shares offered by the Fund are different. Performance less than or equal to one year is cumulative. Total return prior to commencement of I Shares reflects the total return of another class adjusted, where indicated, to reflect applicable sales charges (but not adjusted for other expenses). If adjusted for expenses, return would be different. The minimum investment is \$1,000 for A Shares and \$250,000 for I Shares. Minimums may be waived in certain situations. Please see the prospectus for additional information.

Effective April 29, 2022, the minimum initial investment of Class I shares is increased from \$250,000 to \$1,000,000. The minimum initial investment may be waived in certain situations. Please see the Fund's prospectus for additional information.

About Risk: The value of investments held by the Fund may increase or decrease in response to economic, and financial events (whether real, expected or perceived) in the U.S. and global markets. The value of equity securities is sensitive to stock market volatility. Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, currency exchange rates or other conditions. In emerging countries, these risks may be more significant. The securities markets in the India region are comparatively undeveloped and may be concentrated in certain sectors. Governmental actions in India can have a significant affect on economic conditions in the India region. A non-diversified fund may be subject to greater risk by investing in a smaller number of investments than a diversified fund. Smaller companies are generally subject to greater price fluctuations, limited liquidity, higher transaction costs and higher investment risk than larger, more established companies. Because the Fund may invest significantly in a particular geographic region or country, value of Fund shares may fluctuate more than a fund with less exposure to such areas. The Fund is exposed to liquidity risk when trading volume, lack of a market maker or trading partner, large position size, market conditions, or legal restrictions impair its ability to sell particular investments or to sell them at advantageous market prices. The impact of the coronavirus on global markets could last for an extended period and could adversely affect the Fund's performance. No fund is a complete investment program and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the Fund prospectus for a complete description.

³Percent of total net assets. Top 10 Holdings excludes cash and equivalents. Portfolio profile subject to change due to active management. Percentages may not total 100% due to rounding. ⁴Source: Zephyr. Alpha measures risk-adjusted performance, showing excess return delivered at the same risk level as the benchmark. Beta measures the volatility of a fund relative to the overall market. R-Squared represents the percentage of the portfolio's movement that can be explained by the general movement of the market. Standard deviation measures the historic volatility of a fund. Sharpe Ratio uses standard deviation and excess return to determine reward per unit of risk.

Before investing, investors should consider carefully the investment objectives, risks, charges and expenses of a mutual fund. This and other important information is contained in the prospectus and summary prospectus, which can be obtained from a financial advisor. Prospective investors should read the prospectus carefully before investing.
