

SPDR® S&P® China ETF

Key Features

- The SPDR® S&P® China ETF seeks to provide investment results that, before fees and expenses, correspond generally to the total return performance of the S&P® China BMI Index (the "Index")
- Seeks to provide the investable universe of publicly traded companies domiciled in China that are available to foreign investors
- May also include China A Shares available via the Shanghai-Hong Kong Stock Connect or Shenzhen-Hong Kong Stock Connect Facilities

About This Benchmark

The S&P® China BMI Index is a market capitalization weighted index designed to define and measure the investable universe of publicly traded companies domiciled in China available to foreign investors. The Index also may include equity securities issued by companies incorporated in Mainland China that are denominated and currently traded in Renminbi on the Shanghai or Shenzhen Exchanges via the Shanghai-Hong Kong Stock Connect or Shenzhen-Hong Kong Stock Connect facilities (commonly known as "A Shares" or "China A Shares"). The Index component securities are a subset, based on region, of component securities included in the S&P Global BMI (Broad Market Index). The S&P Global BMI is a rules-based index that measures global stock market performance. A country will be eligible for inclusion in the S&P Global BMI if it is classified as either a developed or emerging market by the S&P Global Equity Index Committee. Country classification is reviewed annually and determined based on quantitative criteria and feedback from market participants via a publicly available market consultation, as summarized in the Fund's prospectus. The Index is "float-adjusted," meaning that only those shares publicly available to investors are included in the Index calculation. All stocks are weighted proportionally to their float-adjusted market capitalization and the Index is reconstituted annually in September. In addition, the Index rebalances quarterly to allow for changes in shares outstanding and the inclusion of eligible initial public offerings. Please see the section of the fund's prospectus entitled "The Fund's Principal Investment Strategy" for additional information regarding the Index.

Performance quoted represents past performance, which is no guarantee of future results. Investment return and principal value will fluctuate, so you may have a gain or loss when shares are sold. Current performance may be higher or lower than that quoted. All results are historical and assume the reinvestment of dividends and capital gains. Visit ssga.com for most recent month-end performance. Performance of an index is not illustrative of any particular investment. It is not possible to invest directly in an index. Index funds are unmanaged and do not reflect the deduction of any fees or expenses. Index returns reflect all items of income, gain and loss and the reinvestment of dividends and other income as applicable.

Glossary

NAV The market value of a mutual fund's or ETFs total assets, minus liabilities, divided by the number of shares outstanding.

Market Value Determined by the midpoint between the bid/offer prices as of the closing time of the New York Stock Exchange (typically 4:00PM EST) on business days.

Gross Expense Ratio The fund's total annual operating expense ratio. It is gross of any fee waivers or expense reimbursements. It can be found in the fund's most recent prospectus.

30 Day SEC Yield (Also known as Standardized Yield) An annualized yield that is calculated by dividing the net investment income earned by the fund over the most recent 30-day period by the current maximum offering price.

Index Dividend Yield The weighted average of the underlyings' indicated annual dividend divided by price, expressed as a percentage.

Price/Earnings Ratio FY1 The weighted harmonic average of current share price divided by the forecasted one year earnings

per share for each security in the fund.

Negative and positive outliers are included in the calculation.

Price/Book Ratio The weighted harmonic average of closing market price divided by the most recent reported book value for each security in the fund's portfolio as calculated for the last twelve months.

Important Risk Information

Weights are as of the date indicated, are subject to change, and should not be relied upon as current thereafter.

Investing involves risk including the risk of loss of principal.

The information provided does not constitute investment advice and it should not be relied on as such. It should not be considered a solicitation to buy or an offer to sell a security. It does not take into account any investor's particular investment objectives, strategies, tax status or investment horizon. You should consult your tax and financial advisor.

The whole or any part of this work may not be reproduced, copied or transmitted or any of its contents disclosed to third parties without SSGA's express written consent.

This communication is not intended to be an investment recommendation or investment advice and should not be relied upon as such.

Foreign (non-U.S.) Securities may be subject to greater political, economic, environmental, credit and information risks. Foreign securities may be subject to

higher volatility than U.S. securities, due to varying degrees of regulation and limited liquidity. These risks are magnified in **emerging markets**.

Equity securities may fluctuate in value in response to the activities of individual companies and general market and economic conditions.

Non-diversified funds that focus on a relatively small number of securities tend to be more volatile than diversified funds and the market as a whole.

Passively managed funds hold a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.

While the shares of ETFs are tradable on secondary markets, they may not readily trade in all market conditions and may trade at significant discounts in periods of **market stress**.

ETFs trade like stocks, are subject to investment risk, fluctuate in market value and may trade at prices above or below the ETFs net asset value. Brokerage commissions and ETF expenses will reduce returns.
