

Principal® Edge MidCap Fund

as of 03/31/2022

A Shares: **PEMCX**

Investment Strategy

The investment seeks long-term growth of capital. Under normal circumstances, the fund invests at least 80% of its net assets, plus any borrowings for investment purposes, in equity securities of companies with medium market capitalizations at the time of purchase. It invests in real estate investment trust securities. The fund invests in equity securities with value and/or growth characteristics and constructs an investment portfolio that has a "blend" of equity securities with these characteristics.

Investment results shown represent historical performance and do not guarantee future results. Your investment's returns and principal values will fluctuate with changes in interest rates and other market conditions so the value, when redeemed, may be worth more or less than original costs. Current performance may be lower or higher than the performance shown. For more information, including the most recent month-end performance, visit principalfunds.com, call your financial professional, or call 800-222-5852. A sales charge may apply as follows: Class A shares: maximum up-front sales charge of 5.50%. See the prospectus for details. Performance listed with sales charge reflects the maximum sales charge.

Morningstar percentile rankings are based on total returns and do not reflect the inclusion of sales charges. If sales charges were reflected, rankings could be lower.

Returns shown for less than one year are not annualized.

Gross Expense Ratio is the current maximum expense ratio, as a percentage of assets that can be applied to this investment option. Net Expense Ratio represents the gross expense ratio less any fee waivers, reimbursements or caps, if applicable. The expense ratio, as a percentage of net assets, includes operating expenses, management fees, including 12b-1 fees, and administrative fees. When gross and net expense ratios differ, the investment adviser may have agreed to waive certain expenses that would normally be payable by the fund (through the noted dates) or contractually agreed to limit the investment option's expenses.

¹ Performance assumes reinvestment of all dividends and capital gains. Extended performance is calculated based on the historical performance of the fund's oldest share class, adjusted for the fees and expenses of the share class shown. Periods of less than one year are not annualized. Morningstar percentile rankings are based on total returns and do not reflect the inclusion of sales charges. If sales charges were reflected, rankings could be lower.

² The annual total returns shown above represent performance for Class A shares (not adjusted for sales charge) and any extended annual performance is based on the fund's oldest share class (not adjusted for sales charge). Annual total returns for other share classes will differ.

Portfolio information under the Asset Distribution Table depicts a breakdown of the investment option's portfolio holdings, as of the date listed, into general investment classes. The x-axis represents the percentage each investment group holds, with the y-axis representing a zero value. Values to the right of the y-axis represent long security positions, while values to the left of the y-axis represent short security positions. The table to the right of the bar chart sums these two values to present the net emphasis of each investment group. Due to rounding, the total net position may not equal 100%. Long positions involve buying a security and selling it later, with the hope that the security price rises over time. In contrast, short positions are taken to benefit from anticipated price declines. Portfolio holdings are subject to change and companies referenced in this report may not currently be held. Information is current as of the creation of this piece. Keep in mind that portfolio holdings are subject to risk. For a complete list of the most recent publicly available holdings visit principalfunds.com.

Small-cap and mid-cap investment options are subject to more fluctuation in value and may have additional risks than other investment options with stocks of larger, more stable companies.

Small-cap and mid-cap stocks may have additional risks, including greater price volatility.

Russell Midcap Index includes firms 201 through 1000, based on market capitalization, from the Russell 3000 Index.

Alpha: The difference between an investment's actual returns and its expected performance, given its level of risk (as measured by beta). **Beta:** An investment's sensitivity to market movements. **R-Squared:** Ranges from 0 to 100 and reveals how closely an investment's returns track those of a benchmark index. **Standard Deviation:** Measures how much an investment's returns are likely to fluctuate.
