Past performance does not guarantee future results. Graph and CYP do not include the effects of sales charges and reflect reinvestment of all distributions. If sales charges were included, returns would have been lower. Holdings/allocation may vary. Largest holdings excludes cash, cash equivalents, money market funds and enhanced cash strategies. Totals may not sum due to rounding. This is not a recommendation to buy or sell any security listed.

The Fund may invest in **equity and equity-related securities**, where the value of a particular security could go down resulting in a loss of money, including **small company risk**, which may be comparatively less liquid and fluctuate in value more than the stocks of larger, more established companies. The Fund may be subject to **market risks**, where securities markets may be volatile and the market prices of the Fund's securities may decline. The Fund's **blend investment style** may subject the Fund to risks of both value and growth investing. As a "fund of funds" investment option, the Fund could be subject to **large scale redemption risk** from time to time and could be required to liquidate its assets at inopportune times or at a loss or depressed value. **Diversification** does not assure a profit against loss in declining markets. The Fund is also subject to the risks of: economic and market events, increased expenses, and market disruption and geopolitical risks. The risks associated with the Fund are more fully explained in the prospectus and summary prospectus. These risks may increase the Fund's share price volatility. There is no guarantee the Fund's objective will be achieved.

Companies classified by Jennison Associates LLC are not sponsored by the S&P/MSCI GICS classification system). All other data from PGIM, Inc. (PGIM). **Total return** describes the return to the investor after net operating expenses but before any sales charges are imposed. **SEC standardized return** describes the return to the investor after net operating expenses and maximum sales charges are imposed. All returns assume share price changes as well as the compounding effect of reinvested dividends and capital gains. Returns may reflect fee waivers and/or expense reimbursements. Without such, returns would be lower. All returns 1-year or less are cumulative. Class R6 shares may be available to group retirement plans, institutional investors, and individuals through certain retirement, mutual fund wrap and asset allocation programs. Please see the prospectus for additional information about fees, expenses, and investor eligibility. All data is unaudited and subject to change.

[†]The **Russell 2000® Index** measures the performance of the small- to mid-cap segment of the U.S. equity universe. The Index is a subset of the Russell 3000 Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. The Index is constructed to provide a comprehensive and unbiased small-cap barometer and is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small-cap opportunity set. Enhanced cash strategies are variations on traditional money market vehicles. They are designed to provide liquidity and principal preservation, but with more of an emphasis on seeking returns that are superior to those of traditional money market offerings. **Average weighted market cap** is the average market capitalization of stocks in a fund, each weighted by its proportion of assets. **Beta** measures a fund's sensitivity to changes in the overall market relative to its benchmark. The **P/E Ratio** (Source: Morningstar, Inc.) relates the price of a stock to the per-share earnings of the company. P/E is calculated using a harmonic weighted average, which excludes outliers that can easily skew results. **Standard deviation** depicts how widely returns vary around its average and is used to understand the range of returns most likely for a given fund. A higher standard deviation generally implies greater volatility. **Turnover Ratio** is the rate of trading in a portfolio, higher values imply more frequent trading. Due to data availability, statistics may not be as of the current reporting period.
