The Approach

Conducting fundamental research focusing on balance sheets, earnings, growth potential and other key metrics, management attempts to identify companies that it believes have the ability to produce attractive levels of dividend income over time.

The Features

Over time, companies that have initiated and/or increased their dividends have historically tended to outperform nondividend payers or stable dividend payers. In addition, dividend growth has shown to have historically outpaced the rate of inflation over time.

Strong Morningstar Ratings as of 06/30/2022[†]

Overall Morningstar Rating[™] (Out of 1225 funds in the Large Blend category)

The Morningstar Rating[™] for funds, or "star rating", is calculated for managed products (including mutual funds and exchange-traded funds) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. ©2022 Morningstar. RISK CONSIDERATIONS The value of investments held by the Fund may increase or decrease in response to economic, and financial events (whether real, expected or perceived) in the U.S. and global markets. The value of equity securities is sensitive to stock market volatility. Changes in the dividend policies of companies could make it difficult to provide a predictable level of income. Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, currency exchange rates or other conditions. The Fund is exposed to liquidity risk when trading volume, lack of a market maker or trading partner, large position size, market conditions, or legal restrictions impair its ability to sell particular investments or to sell them at advantageous market prices. The impact of the coronavirus on global markets could last for an extended period and could adversely affect the Fund's performance. No fund is a complete investment program and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the Fund prospectus for a complete description.

*The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Star ratings do not reflect the effect of any applicable sales load. ⁴Percent of total net assets. Top 10 Holdings excludes cash and equivalents. Portfolio profile subject to change due to active management. Percentages may not total 100% due to rounding. A delay in transaction settlement may result in a negative cash position.
