

Invesco SteelPath MLP Alpha Plus Fund

A: MLPLX | R6: OSPPX | Y: MLPNX

Why invest in this fund

- 1 Energy infrastructure pioneers.**
Investing in energy infrastructure since 2004, we are one of the largest and longest-tenured investment managers in the asset class.
- 2 Granular bottom-up approach.**
We have a comprehensive understanding of each underlying asset and seek to find unrecognized growth opportunities.
- 3 Focus on stable cash flows.**
We seek energy infrastructure investments that can exhibit cash flow durability across a variety of commodity-price environments.

What this fund does

The fund seeks to deliver attractive income and growth by investing in a concentrated portfolio of energy infrastructure securities that provide the critical link in the energy value chain by processing, storing, and transporting hydrocarbons. The fund produces one Form 1099 for tax reporting and uses leverage of approximately 25% of total assets.

Performance quoted is past performance and cannot guarantee comparable future results; current performance may be lower or higher. Visit invesco.com for the most recent month-end performance. Performance figures reflect reinvested distributions and changes in net asset value (NAV). Investment return and principal value will vary so that you may have a gain or a loss when you sell shares. As the result of a reorganization on May 24, 2019, the returns of the fund for periods on or prior to May 24, 2019 reflect performance of the Oppenheimer predecessor fund. Share class returns will differ from the predecessor fund due to a change in expenses and sales charges. Index source: FactSet Research Systems Inc. Had fees not been waived and/or expenses reimbursed in the past, returns would have been lower. Performance shown at NAV does not include the applicable front-end sales charge, which would have reduced the performance.

Class Y and R6 shares have no sales charge; therefore, performance is at NAV. Class Y shares are available only to certain investors. Class R6 shares are closed to most investors. Please see the prospectus for more details.

The Alerian MLP Index is a market-cap weighted, float-adjusted index created to provide a comprehensive benchmark for investors to track the performance of the energy MLP sector. The Index components are selected by Alerian, LLC ("Alerian"). An investment cannot be made directly in an index.

About Risk

The fund may use leverage to seek to enhance income, which creates the likelihood of greater volatility of the fund's shares and may also impair the ability to maintain its qualification for federal income tax purposes as a regulated investment company.

The fund is subject to certain other risks. Please see the current prospectus for more information regarding the risks associated with an investment in the fund.

Stock and other equity securities values fluctuate in response to activities specific to the company as well as general market, economic and political conditions.

Derivatives may be more volatile and less liquid than traditional investments and are subject to market, interest rate, credit, leverage, counterparty, and management risks. An investment in a derivative could lose more than the cash amount invested.

Although the characteristics of MLPs closely resemble a traditional limited partnership, a major difference is that MLPs may trade on a public exchange or in the over-the-counter market. Although this provides a certain amount of liquidity, MLP interests may be less liquid and subject to more abrupt or erratic price movements than conventional publicly traded securities. The risks of investing in an MLP are similar to those of investing in a partnership and include more flexible governance structures, which could result in less protection for investors than investments in a corporation. MLPs are generally considered interest-rate sensitive investments. During periods of interest rate volatility, these investments may not provide attractive returns.

The Fund is considered non-diversified and may experience greater volatility than a more diversified investment.

This does not constitute a recommendation of any investment strategy or product for a particular investor. Investors should consult a financial professional before making any investment decisions.

Note: Not all products available at all firms. Financial professionals, please contact your home office.

The fund holdings are organized according to the Global Industry Classification Standard, which was developed by and is the exclusive property and service mark of MSCI Inc. and Standard & Poor's.

Alpha (cash adjusted) is a measure of performance on a risk-adjusted basis.

Beta (cash adjusted) is a measure of relative risk and the slope of regression.

Standard deviation measures a fund's range of total returns and identifies the spread of a fund's short-term fluctuations.

The **up and down capture** measures how well a manager was able to replicate or improve on periods of positive benchmark returns and how severely the manager was affected by periods of negative benchmark returns.
