Traditional Equity

Defensive Small-Cap Value Exposure

Why Invest

- ▶ Focuses on mitigating losses in down markets while participating in up markets
- ▶ Disciplined valuation process which measures downside risk before upside potential
- ▶ Designed to compound returns over a full market cycle with lower volatility than peers and the index

INVESTORS

Closed to certain new investors.

Index represents the Russell 2000® Value Index.

Returns include reinvestment of dividends and capital gains. Returns greater than one year are annualized.

This Fund has a performance-based management fee that may adjust up or down based on the Fund's performance.

Holdings are subject to change without notice.

There is no assurance the stated objective(s) will be met.

Equity country, regional, sector and industry weights primarily based on MSCI and GICS classifications. Fixed income country, regional, sector and industry weights primarily based on Bloomberg classifications.

Investing involves market risk and it is possible to lose money by investing. Investment return and value will fluctuate in response to issuer, political, market and economic developments, which can affect a single issuer, issuers within an industry, economic sector or geographic region, or the market as a whole.

Smaller capitalization securities may be less stable and more susceptible to adverse developments, and may be more volatile and less liquid than larger capitalization securities.

Value stocks can continue to be undervalued by the market for long periods of time and may not appreciate to the extent expected.

Initial Public Offerings (IPOs) are highly speculative investments and may be subject to lower liquidity and greater volatility. Special risks associated with IPOs include limited operating history, unseasoned trading, high turnover and non-repeatable performance.

Index performance does not reflect the expenses of managing a portfolio as an index is unmanaged and not available for direct investment.

Russell 2000® Value Index reflects the performance of U.S. small-cap equities with lower price-to-book ratios and lower forecasted growth values. **Alpha** compares risk-adjusted performance relative to an index. Positive alpha means outperformance on a risk-adjusted basis. **Beta** measures the volatility of a security or portfolio relative to an index. Less than one means lower volatility than the index; more than one means greater volatility. **R-squared (R²)** measures the relationship between portfolio and index performance on a scale of 0.00 (0%) to 1.00 (100%). A higher R² indicates more of the portfolio's performance is affected by market movements and vice versa. **Standard Deviation** measures historical volatility. Higher standard deviation implies greater volatility. **Sharpe Ratio** measures risk-adjusted performance using excess returns versus the "risk-free" rate and the volatility of those returns. A higher ratio means better return per unit of risk. **Active Share** represents the portion of portfolio holdings that differ from an index. **Turnover** is a measure of portfolio trading activity. Higher turnover may indicate higher transaction costs and vice versa.
