Performance data shown represents past performance and does not predict or guarantee future results. Investment returns and principal value will fluctuate so that shares redeemed may be worth more or less than their original cost. Current performance may be higher or lower than the performance shown. Total returns for a period of less than one year are cumulative. Returns without sales charges would be lower if the sales charges were included. Returns assume reinvestment of dividends and capital gains. For performance current to the most recent month-end visit nuveen.com. Performance shown for benchmark since inception is as of the Fund's oldest share class.

Class I shares have no sales charge and may be purchased by specified classes of investors. Class C shares have a 1% CDSC for redemptions within less than one year, which is not reflected in the one-year total return. Effective Jul 2018, Class C shares automatically convert to Class A shares during the month in which the 10-year anniversary (effective Mar 2021, this will change to 8-year anniversary) of the share purchase occurred. Since Inception returns for Class C shares for periods longer than 10 years reflect the performance of Class A shares after the deemed 10-year conversion to Class A shares within such periods. Class R6 shares have no sales charge and are available to certain qualified retirement plans and other investors as set forth in the statement of additional information.

Morningstar ranking/number of funds in category displays the Fund's actual rank within its Morningstar Category based on average annual total return and number of funds in that Category. The returns assume reinvestment of dividends and do not reflect any applicable sales charge. Absent expense limitation, total return would be less. Morningstar percentile rankings are the Fund's total return rank relative to all the funds in the same Morningstar Category, where 1 is the highest percentile rank and 100 is the lowest percentile rank.

Important information on risk

Mutual fund investing involves risk; principal loss is possible. Dividend-paying stocks, such as those held by the Fund, are subject to market risk, concentration or sector risk, preferred security risk, and common stock risk. Smaller company stocks are subject to greater volatility. Foreign investments involve additional risks including currency fluctuations, political and economic instability, and lack of liquidity.

This material is not intended to be a recommendation or investment advice, does not constitute a solicitation to buy, sell or hold a security or an investment strategy, and is not provided in a fiduciary capacity. The information provided does not take into account the specific objectives or circumstances of any particular investor, or suggest any specific course of action. Investment decisions should be made based on an investor's objectives and circumstances and in consultation with his or her financial professional.

Glossary

Beta is a measure of the volatility of a portfolio relative to the overall market. A beta less than 1.0 indicates lower risk than the market; a beta greater than 1.0 indicates higher risk than the market. **P/E ratio** of a stock is calculated by dividing the current price of the stock by its forecasted 12 months' earnings

per share. The average of the price/earnings ratio of a fund is a weighted harmonic average of all the current P/E ratios (excluding negatives) of the stocks in the Fund's portfolio. This should not be construed as a forecast of the Fund's performance. **Standard deviation** is a statistical measure of the historical volatility of a mutual fund or portfolio; the higher the number the greater the risk. **Weighted average market capitalization** is the portfolio-weighted mean capitalizations of all equity securities.

S&P 500 Index is an unmanaged index generally considered representative of the U.S. stock market. **It is not possible to invest directly in an index.**
