Hypothetical Growth of \$10,000

As Of 09/30/2022

A hypothetical \$10,000 investment made in the fund ten years ago, or on commencement of operations for funds lacking a ten-year track record. Figures show monthly returns and include reinvestment of dividends and capital gains but do not reflect the effect of any applicable sales charges or redemption fees, which would lower these figures. This chart is not intended to imply any future performance of the fund.

Investment Objective

Seeks long-term growth of capital.

Strategy

Normally investing at least 80% of assets in securities of Japanese issuers and other investments that are tied economically to Japan. Normally investing primarily in common stocks.

Risk

Stock markets, especially foreign markets, are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Foreign securities are subject to interest rate, currency exchange rate, economic, and political risks. The risks are particularly significant for funds that focus on a single country or region.

Additional Information

The Morningstar Rating™ for funds, or "star rating," is calculated for funds with at least a three-year history. (Exchange traded funds and open-end mutual funds are considered a single population for comparative purposes.) It is calculated based on a Morningstar risk-adjusted return measure that accounts for variation in a fund's monthly excess performance (excluding the effect of sales charges, if any), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each fund category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. Morningstar Rating is for the indicated share class only; other classes may have different performance characteristics. 2016 Morningstar, Inc. All rights reserved. If applicable: StyleMaps estimate characteristics of a fund's equity holdings over two dimensions: market capitalization and valuation. The percentage of fund assets represented by these holdings is indicated besides each StyleMap. The position of the most recent publicly released full holdings is denoted on the StyleMap with a dot. Historical StyleMap characteristics are calculated for the shorter of either the past three years or the life of the fund, and are represented by the shading of the box(es) previously occupied by the dot.

Definitions

Alpha-Annualized A risk-adjusted performance measure. A positive (negative) alpha indicates stronger (poorer) fund performance than predicted by the fund's level of risk measured by beta. **Annualized Tracking Error** measures how closely the fund's returns have tracked an index. The standard deviation of the monthly differences between the fund return and the index return over a 36 month rolling time horizon. **Annualized Turnover Rate** is the lesser of amounts of purchases or sales of long-term portfolio securities divided by the monthly average value of long-term securities owned by the fund. **Asset Allocation** refers to the makeup of a fund's portfolio expressed in categories such as stocks, bonds, real estate, etc., as a percentage of Net Assets. **Average Annual Total Return** A hypothetical rate of return if achieved annually would have produced the same cumulative total return if performance had been constant over the entire period. Average annual total returns smooth out variation in performance; they are not the same as actual year-by-year results. Total returns are historical and include changes in share price and reinvestment of dividends and capital gains, if any. **Beta** a measure of the volatility of a fund relative to its benchmark. A beta greater (less) than 1 is more (less) volatile than the index. **Downside Volatility** measures the volatility of a fund's returns below a minimum accepted level; calculated as the standard deviation of a fund's under-performance relative to the benchmark. **Foreign Investments** percentage of portfolio holdings in foreign investments. **Gross Expense Ratio** is the total annual class operating expense ratio from the most recent prospectus and generally is based on amounts incurred during the most recent fiscal year. **Information Ratio** measures a fund's active return (fund's average monthly return minus the benchmark's average monthly return) in relation to the volatility of its active returns. **Net Expense Ratio** is an annualized figure that reflects amounts reimbursed by Fidelity or reductions from brokerage service or other expense offset arrangements, if any, and is updated as the annual or semiannual information is available. Net Expense Ratio could be higher than the Gross Expense Ratio due to different reporting dates and fluctuations in expenses and/or asset levels. **Relative Volatility** compares a fund's volatility to a benchmark. A relative volatility greater (less) than 1 means the fund's returns have been more (less) variable. **R-Squared (R²)** measures how a fund's performance correlates with a benchmark index's performance and shows what portion of it can be explained by the performance of the overall market/index. R² ranges from 0, meaning no correlation, to 1, meaning performance correlation. **Sharpe Ratio** is a measure of historical adjusted performance calculated by dividing the fund's excess returns (fund's average monthly returns minus the average monthly return of the Salomon Smith Barney 3-Month T-Bill Index) by the standard deviation of those returns. The higher the ratio, the better the fund's return per unit of risk. **Standard Deviation** measures the historical volatility of a fund. The greater the standard deviation, the greater the fund's volatility. **Top Industry Holdings** diversification of fund assets by major industry, arranged by weighting from largest to smallest positions on the dates shown.
