

# OAKMARK FUNDS

September 2022

At Oakmark, we are long-term investors. We attempt to identify growing businesses that are managed to benefit their shareholders. We will purchase securities only when priced substantially below our estimate of intrinsic value. After purchase, we patiently wait for the gap between price and intrinsic value to close.

## Sector Distribution (% of Equity)

## Top 10 Geographic Allocation (% of Equity)

United Kingdom	19.6

The performance data quoted represents past performance. **Past performance does not guarantee future results.** The investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Total return includes change in share prices and, in each case, includes reinvestment of dividends and capital gain distributions. To obtain most recent month-end performance data, visit [Oakmark.com](http://Oakmark.com). Before investing in any Oakmark Fund, you should carefully consider the Fund's investment objectives, risks, management fees and other expenses. This and other important information is contained in a Fund's prospectus and summary prospectus. Please read the prospectus and summary prospectus carefully before investing. For more information, please visit [Oakmark.com](http://Oakmark.com) or call 1-800-OAKMARK (1-800-625-6275).

The cumulative effect of fees and expenses can substantially reduce the growth of a participant's or beneficiary's retirement savings. For more information regarding the long-term effects of fees and expenses on an investment, visit the Department of Labor's website at:

[http://www.dol.gov/ebsa/publications/401k\\_employee.html](http://www.dol.gov/ebsa/publications/401k_employee.html)

**Investing in value stocks presents the risk that value stocks may fall out of favor with investors and underperform growth stocks during given periods.**

**Investing in foreign securities presents risks which in some ways may be greater than U.S. investments. Those risks include: currency fluctuation; different regulation, accounting standards, trading practices and levels of available information; generally higher transaction costs; and political risks.**

**The stocks of smaller companies often involve more risk than the stocks of larger companies. Stocks of small companies tend to be more volatile and have a smaller public market than stocks of larger companies. Small companies may have a shorter history of operations than larger companies, may not have as great an ability to raise additional capital and may have a less diversified product line, making them more susceptible to market pressure.**

Market Cap is the market price of an entire company. The price to earnings ratio ("P/E") compares a company's current share price to its per-share earnings. It may also be known as the "price multiple" or "earnings multiple", and gives a general indication of how expensive or cheap a stock is. Investors should not base investment decisions on any single attribute or characteristic data point. Price-to-Cash Flow (P/C) is defined as a stock's capitalization divided by its cash flow. The Price-to-Book (P/B) Ratio is a stock's capitalization divided by its book value. P/E, P/C and P/B are projected calculations based on our analysts' estimates.

The MSCI World ex U.S. Small Cap Index (Net) is designed to measure performance of small-cap stocks across 22 of 23 Developed Markets (excluding the United States). The index covers approximately 14% of the free float-adjusted market capitalization in each country. This benchmark calculates reinvested dividends net of withholding taxes. The MSCI World ex U.S. Index (Net) is a free float-adjusted, market capitalization-weighted index that is designed to measure international developed market equity performance, excluding the U.S. The index covers approximately 85% of the free float-adjusted market capitalization in each country. This benchmark calculates reinvested dividends net of withholding taxes. These indexes are unmanaged and investors cannot invest directly in these indexes.

On occasion, Harris may determine, based on its analysis of a particular multi-national issuer, that a country classification different from MSCI best reflects the issuer's country of investment risk. In these instances, reports with country weights and performance attribution will differ from reports using MSCI classifications. Harris uses its own country classifications in its reporting processes, and these classifications are reflected in the included materials.
