

## KraneShares MSCI One Belt One Road ETF

### Investment Strategy:

The KraneShares MSCI One Belt One Road ETF (ticker: OBOR) seeks to provide investment results that track the price and yield performance of the MSCI Global China Infrastructure Exposure Index. The Index aims to identify potential beneficiaries of the One Belt One Road initiative based on how their geography, revenue, and sector attributes align with the broad theme. OBOR seeks to capture the economic growth and monetize the potential upside for the companies involved in China's One Belt One Road initiative.

### OBOR Initiative Facts:

- The One Belt One Road (OBOR) initiative, established by President Xi Jinping of China, is an extensive long-term infrastructure initiative modernizing the original Silk Road trading routes by land and by sea.
- China has signed cooperation agreements with over 140 countries and international organizations<sup>1</sup>, which, including China, represent over half the world's population and more than a third of global GDP<sup>2</sup>.
- The OBOR initiative could see \$4-8 trillion in investment in the coming years and is poised to reshape global trade<sup>3</sup>.

### OBOR ETF Highlights:

- Includes countries who may benefit from the OBOR initiative, such as China, Russia, Singapore, Malaysia, Israel, and others.
- Includes sectors of primary focus to the OBOR initiative, such as industrials, utilities, materials, financials, and energy.
- Benchmarked to MSCI, a global leader in international indexing.

This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting [www.kraneshares.com](http://www.kraneshares.com). Read the prospectus carefully before investing.**

#### Risk Disclosures:

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives.

The Fund may invest in derivatives, which are often more volatile than other investments and may magnify the Fund's gains or losses. A derivative (i.e., futures/forward contracts, swaps, and options) is a contract that derives its value from the performance of an underlying asset. The primary risk of derivatives is that changes in the asset's market value and the derivative may not be proportionate, and some derivatives can have the potential for unlimited losses. Derivatives are also subject to liquidity and counterparty risk. The Fund is subject to liquidity risk, meaning that certain investments may become difficult to purchase or sell at a reasonable time and price. If a transaction for these securities is large, it may not be possible to initiate, which may cause the Fund to suffer losses. Counterparty risk is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of the derivative.

The ability of the Fund to achieve its respective investment objectives is dependent, in part, on the continuous availability of A Shares and the ability to obtain, if necessary, additional A Shares quota. If the Fund is unable to obtain sufficient exposure to limited availability of A Share quota, the Fund could seek exposure to the component securities of the Underlying Index by investment in other types of securities. The Fund is subject to political, social or economic instability within China which may cause decline in value. Emerging markets involve heightened risk related to the same factors as well as increase volatility and lower trading volume. Fluctuations in currency of foreign countries may have an adverse effect to domestic currency values. The Fund may invest in Initial Public Offerings (IPOs). Securities issued in IPOs have no trading history, and information about the companies may be available for very limited periods. In addition, the prices of securities sold in IPOs may be highly volatile. In addition, as the Fund increases in size, the impact of IPOs on the Fund's performance will generally decrease.

Narrowly focused investments typically exhibit higher volatility. The Fund's assets are expected to be concentrated in a sector, industry, market, or group of concentrations to the extent that the Underlying Index has such concentrations. The securities or futures in that concentration could react similarly to market developments. Thus, the Fund is subject to loss due to adverse occurrences that affect that concentration. In addition to the normal risks associated with investing, investments in smaller companies typically exhibit higher volatility.

ETF shares are bought and sold on an exchange at market price (not NAV) and are not individually redeemed from the Fund. However, shares may be redeemed at NAV directly by certain authorized broker-dealers (Authorized Participants) in very large creation/redemption units. The returns shown do not represent the returns you would receive if you traded shares at other times. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. Beginning 12/23/2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates the current NAV per share. Prior to that date, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time.
