

KraneShares Asia Pacific High Income Bond ETF*

Investment Strategy:

KHYB is an active ETF managed by sub-advisor Nikko Asset Management Americas, Inc. ("Nikko"). KHYB is benchmarked to the JP Morgan Asia Credit Index (JACI) Non-Investment Grade Corporate Index. The fund provides exposure to USD-denominated high yield debt securities issued by companies in Asia.

Asia Bond Market Features:

- The Asia Bond Market has witnessed steady growth over the last decade. The JP Morgan Asia Credit Index grew from a market capitalization of \$250 billion in 2010 to approximately \$1 trillion in June 2022, an increase of 300%¹.
- The Asia high yield bond market currently offers higher yields than other global high yield bond markets. As of March 2022, Asia high yield bonds had a yield of 10.4% compared to 8.9% for US high yield bonds.¹
- The default rate of Asia high-yield corporate bonds has been lower than that of high yield bonds in other emerging market regions in six of the past nine years, and was lower than the US high yield default rate in both 2019 and 2020.²

KHYB Features:

- Sub-advised by Nikko. Nikko was established in 1959 and is one of Asia's largest asset managers with over \$283 billion in assets under management. Nikko is a leader in Asia fixed income with 30+ years of experience in the market³.
- KHYB portfolio manager Wai Hoong Leong is supported by one of the largest Asia fixed income teams. His team uses top-down macro research and bottom-up credit research to construct the Fund's portfolio.

*Formerly the KraneShares Asia Pacific High Yield Bond ETF, and prior to August 2, 2021, the KraneShares CCBS China Corporate High Yield Bond USD Index ETF (ticker: KCCB)

1. Data from JP Morgan as of 6/30/2022. Asia high yield bond market = the JP Morgan Asia Credit Index Corporates Non-Investment Grade. US high yield bond market = the ICE BofA US High Yield Index.
2. Data from JP Morgan as of April 2022.
3. Data from Nikko Asset Management as of 3/31/2022.

The performance data quoted represents past performance. Past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investors shares, when sold or redeemed, may be worth more or less than their original cost and current performance may be lower or higher than the performance quoted. For performance data current to the most recent month end, please visit www.kraneshares.com.

The Hybrid KHYB Index (noted as "index" above) consists of the Solactive USD China Corporate High Yield Bond Index from inception through August 2, 2021 and the JP Morgan Asia Credit Index (JACI) Non-Investment Grade Corporate Index going forward. Performance shown for periods before August 2, 2021, reflects that of the prior Fund. Future performance may be different than past performance due to changes, including investment objectives and principal investment strategies. Additionally, before August 2, 2021, a co-manager assisted in the day-to-day portfolio management, and the Fund previously sought to track the performance of a different Index before fees and expenses.

Index returns are for illustrative purposes only. Index performance returns do not reflect any management fees, transaction costs or expenses. Indexes are unmanaged and one cannot invest directly in an index.

Definitions:

30-day SEC Yield: standard yield calculation developed by the U.S. Securities and Exchange Commission (SEC) that allows for fairer comparisons of bond funds. It is based on the most recent 30-day period covered by the fund's filings with the SEC.

Carefully consider the Funds' investment objectives, risk factors, charges and expenses before investing. This and additional information can be found in the Funds' full and summary prospectus, which may be obtained by visiting www.kraneshares.com. Read the prospectus carefully before investing.

Risk Disclosures:

Investing involves risk, including possible loss of principal. There can be no assurance that a Fund will achieve its stated objectives.

The Fund may invest in derivatives, which are often more volatile than other investments and may magnify the Fund's gains or losses. A derivative (i.e., futures/forward contracts, swaps, and options) is a contract that derives its value from the performance of an underlying asset. The primary risk of derivatives is that changes in the asset's market value and the derivative may not be proportionate, and some derivatives can have the potential for unlimited losses. Derivatives are also subject to liquidity and counterparty risk. The Fund is subject to liquidity risk, meaning that certain investments may become difficult to purchase or sell at a reasonable time and price. If a transaction for these securities is large, it may not be possible to initiate, which may cause the Fund to suffer losses. Counterparty risk is the risk of loss in the event that the counterparty to an agreement fails to make required payments or otherwise comply with the terms of the derivative.

The Fund is subject to the legal, regulatory, political and economic instability associated with investing in Asia-Pacific countries including China and Japan which may cause a decline in value. Japan has also experienced natural disasters of varying degrees of severity, which could negatively affect the Fund. Emerging markets involve heightened risk related to the same factors as well as increase volatility and lower trading volume. Fluctuations in currency of foreign countries may have an adverse effect to domestic currency values. The Fund can invest in bonds generally and high yield bonds specifically. High yield bonds involve greater risks of default or downgrade and are more volatile than investment grade securities. The Fund is subject to interest rate risk, which is the chance that bonds will decline in value as interest rates rise. The Fund is subject to liquidity risk, meaning that certain investments may become difficult to purchase or sell at a reasonable time and price. If a transaction for these securities is large, it may not be possible to initiate which may cause the Fund to suffer losses.

The Fund is subject to sovereign and quasi-sovereign debt risk. The governmental authority that controls the repayment of sovereign and quasi-sovereign debt may be unwilling or unable to repay the principal and/or interest when due. KHYB is non-diversified.

ETF shares are bought and sold on an exchange at market price (not NAV) and are not individually redeemed from the Fund. However, shares may be redeemed at NAV directly by certain authorized broker-dealers (Authorized Participants) in very large creation/redemption units. The returns shown do not represent the returns you would receive if you traded shares at other times. Shares may trade at a premium or discount to their NAV in the secondary market. Brokerage commissions will reduce returns. Beginning 12/23/2020, market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates the current NAV per share. Prior to that date, market price returns were based on the midpoint between the Bid and Ask price. NAVs are calculated using prices as of 4:00 PM Eastern Time.
