INDUSTRY GROUP ALLOCATIONS

IMPORTANT RISK INFORMATION

†ETFs use creation units, which allow for the purchase and sale of assets in the fund collectively. Consequently, ETFs usually generate fewer capital gain distributions overall, which can make them somewhat more tax-efficient than mutual funds.

Shares are bought and sold at market price, not net asset value (NAV), and are not individually redeemable from the fund. NAV represents the value of each share's portion of the fund's underlying assets and cash at the end of the trading day. Market price returns reflect the midpoint of the bid/ask spread as of the close of trading on the exchange where fund shares are listed.

The S&P 500® Index is an unmanaged index considered representative of the U.S. stock market. The S&P U.S. Preferred Stock Index represents the US preferred stock market.

Investing involves risks. Principal loss is possible. The Fund's return may not match the return of the Index. The fund invests in preferred securities which may be subject to many of the risks associated with debt securities, including interest rate risk. The fund invests in equity securities which may be subject to volatile price fluctuations. Because the fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in share price.

Return/Risk is the relationship between the amount of return gained on an investment and the amount of risk undertaken in that investment. SEC 30 day yield is a standard yield calculation developed by the Securities and Exchange Commission that allows for a common ground comparison of yield performance. It is based on the most recent 30-day period. It is calculated by dividing the net investment income (less expenses) per share over a 30-day period by the current maximum offering price.

S&P and Moody's study the financial condition of an entity to ascertain its creditworthiness. The credit ratings reflect the rating agency's opinion of the holdings financial condition and histories. For information on the rating agencies' methodology, visit <http://www.standardandpoors.com> or <https://www.moody's.com>. The highest rating is AAA, and the lowest is D. Securities with credit ratings of BBB- and above are considered investment grade.

The Fund's investment objectives, risks, charges and expenses should be considered before investing. The prospectus contains this and other important information, and it may be obtained at innovatoretfs.com. Read it carefully before investing.
