¹ The MSCI EAFE Value Index tracks the performance of MSCI EAFE Index stocks with lower price-to-book ratios.

² Average market capitalization measures the size of the companies in which the fund invests. Sharpe ratio is a measure of returns reward per unit of risk for a given period. A high sharpe ratio reflects a strong historical risk-adjusted performance. Standard deviation is a three-year statistical measure of the volatility of a fund's returns. Generally, the greater the standard deviation, the greater the fund's volatility. ³Source: Morningstar, Inc. as of 02/28/2023.

War, terrorism, sanctions, economic uncertainty, trade disputes, public health crises and related geopolitical events have led and, in the future, may lead to significant disruptions in U.S. and world economies and markets, which may lead to increased market volatility and may have significant adverse effects on the fund and its investments.

Fund risk: Investing in foreign securities presents certain risks, such as currency fluctuations, political and economic changes, and market risks. Stocks may decline in value. The fund will be managed using the CROCI® Investment Process which is based on portfolio management's belief that, over time, stocks which display more favorable financial metrics (for example, the CROCI® Economic P/E Ratio) as generated by this process may outperform stocks which display less favorable metrics. This premise may not prove to be correct and prospective investors should evaluate this assumption prior to investing in the fund. The fund's use of forward currency contracts may not be successful in hedging currency exchange rates changes and could eliminate some or all of the benefit of an increase in the value of a foreign currency versus the US dollar. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increase volatility. The fund may lend securities to approved institutions. Please read the prospectus for details.
