## Objective

The fund seeks long-term growth of capital.

## Strategy

Portfolio management aims to add value through stock selection. In choosing securities, portfolio management employs a risk-balanced bottom-ups election process to identify companies it believes are well-positioned and that have above average and sustainable growth potential. Portfolio management utilizes a proprietary investment process designed to identify attractive investments by utilizing proprietary research conducted by in-house analysts. The investment process also takes into consideration various valuation metrics to assess the attractiveness of stocks and assists portfolio management in devising allocations among investable securities.

## Expense ratio (as of latest prospectus)

Class	Net	Gross	Contractual Waiver
A	1.06%	1.15%	11/30/2023
C	1.81%	1.92%	11/30/2023
S	0.81%	0.88%	11/30/2023
INST	0.81%	0.91%	11/30/2023

Without a waiver, returns would have been lower and any rankings/ratings might have been less favorable.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Rating™ for funds, or 'star rating', is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10 year (if applicable) Morningstar Rating metrics. The weights are 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

<sup>3</sup> Price-to-earnings ratio (P/E) is a stock's current price divided by the company's trailing 12-month earnings per share from continuous operations. Average market capitalization measures the size of the companies in which the fund invests. Standard deviation is a three-year statistical measure of the volatility of a fund's returns. Generally, the greater the standard deviation, the greater the fund's volatility. <sup>5</sup>Source: Morningstar, Inc. as of 02/28/2023.
