

JOHCM International Select Fund

Fund strategy

The Fund invests, under normal market conditions, primarily in equity securities of companies headquartered outside the U.S., including those in emerging market countries. The Fund Managers utilize a core investment style with a modest growth tilt and may invest in companies across the market capitalization range in order to achieve the Fund's objective. The Fund Managers seek to make investments in non-US listed companies based on a multi-dimensional investment process that considers growth, valuation, price-trend, and beta.

The performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. The Fund's current performance may be lower or higher than the performance data quoted. Investors may obtain performance information current to the most recent month-end, within 7 business days at www.johcm.com or by calling 1-866-260-9549 or 1-312-557-5913.

Returns for periods of 1 year and less are not annualized. Returns shown, unless otherwise indicated, are total returns, net of fees, with dividends and income reinvested. Fee waivers are in effect; if they had not been in effect performance would have been lower. Historical performance of the International Select Fund for Investor Shares prior to their inception is based on the performance of Institutional Shares. The performance of Investor Shares has been adjusted to reflect differences in expenses.

The MSCI EAFE Index (Europe, Australasia, Far East) is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the US & Canada. Any indices mentioned are unmanaged statistical composites of stock market performance. Investing in an index is not possible.

Morningstar Rating™

Overall Morningstar Rating™ ★ ★ ★

Morningstar Ratings™ are for Institutional shares only; other classes may have different performance characteristics.

Effective July 15, 2015 the JOHCM International Select Fund has been publicly offered on a limited basis only. Please refer to the prospectus for additional details.

Fund manager's commentary

- Turmoil in the banking sector (eg Silicon Valley bank, Signature Bank, Credit Suisse) weighed on equity returns in Q1, but quick central bank and regulatory intervention prompted an equity market bounce later in the period.
- The portfolio performed broadly in line with its benchmark index in Q1, as mid-caps suffered more contagion from the banking crisis while large-caps led the subsequent rally – we are overweight the former and underweight the latter.
- We think most equity markets are in a volatile and drawn-out bottoming process as inflation and interest rates peak, and we are looking for opportunities to add some new growth stocks into the portfolio.

Performance and transactions

The portfolio performed broadly in line with its benchmark index in Q1, as international mid-caps suffered significant contagion from the banking crisis while international large-caps led the subsequent rally – we are overweight the former and underweight the latter.

The quarter was a tale of two halves in two ways. Firstly, turmoil in the US and European banking sector (eg Silicon Valley Bank, Signature Bank, and Credit Suisse crises) initially weighed on equity returns, then quick central bank and regulatory intervention prompted an equity bounce. Secondly, the international small and mid cap index significantly underperformed while the international large cap index outperformed. This divide was even more pronounced in the US, where the big 5 US MAGMA companies (Microsoft, Apple, Google, Meta and Amazon) represented 90% of the SP500's entire gain in Q1 2023.

We own zero Western banks and so avoided the worst of the banking crisis in March. However, the financial contagion from the banking crisis hurt several of our smaller, more financially sensitive stocks like Tenaris, B3, and Anglo American, who all fell by more than 10% during the quarter and are being reviewed.

There were no significant changes to the portfolio during the quarter, but we are looking for opportunities to add some new growth stocks to the portfolio. We are focusing on quality growth stocks with rock solid balance sheets that can withstand the current banking crisis and future recession risk.

Outlook and strategy

Volatility in equity markets will probably persist with risk on/off rotations as inflation and interest rates peak, then perhaps stay higher for longer, and equity markets will try to look through the probable recession.

We see improving fundamentals, valuation, and price trends in the following neighbourhoods:-

- Quality growth stocks, many of which are already down 30-50%.
- UK & European & Japanese global champions, i.e exporters
- Emerging markets domestic consumption growth stocks
- China reopening/recovering, both indirect and direct opportunities

Our scenario analysis is 50% bullish and 50% bearish. Short term reasons to be bearish include recession risk and financial crisis/contagion risk. Medium term reasons to be bullish include the Fed regaining credibility with inflation & interest rates stabilising.

Scenario 1 = 40% probability rally led by quality stocks. It is probably nearer the end of the bear market for economically resilient quality growth stocks that are already down 30-50% after their 2022 interest rate shock.

Scenario 2 = 10% probability rally led by cyclical stocks. It is probably nearer the beginning of the bear market for these stocks because of financial contagion risk and their recessionary earnings risk, but will the equity market look through this?

Scenario 3 = 50% probability equity markets remain volatile or fall. Healthcare is our biggest position relative to benchmark given the sectors positive fundamentals, valuation and trend.

Risk considerations

The Fund invests in International and Emerging Markets. International investments involve special risks, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in Emerging Markets. Such risks include new and rapidly changing political and economic structures, which may cause instability; underdeveloped securities markets; and higher likelihood of high levels of inflation, deflation or currency devaluations.

Emerging Markets involve heightened risks related to the same factors, in addition to those associated with their relatively small size and lesser liquidity.

The small and mid cap companies the Fund may invest in may be more vulnerable to adverse business or economic events than larger companies and may be more volatile; the price movements of the Fund's shares may reflect that volatility.

Fund holdings are subject to change at any time and are not recommendations to buy or sell any security. A list of all holdings during the period, corresponding performance contributions and attributions, and the calculation methodology is available upon request.

Standard deviation	18.52	15.28
Tracking error (%)	7.37	7.19
Upside capture ratio	92	91
Downside capture ratio	98	83

Correlation to benchmark is a measure of the strength of the relationship between a fund and its index.

Sharpe ratio is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk.

Alpha is a measurement of a fund's risk-adjusted performance against its index.

Standard deviation is a statistical measure of distribution around an average, which depicts how widely returns varied over a certain period of time. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility.

Tracking error is a measure of how closely a Fund's performance follows its index.

Upside and downside capture measures a manager's ability to generate excess return above the benchmark return in up markets and retain more of the excess return in down markets. The upside/downside capture ratio is the Fund's up/down market return divided by the index's up/down market return and equals the linked returns for all quarters in which the index return was greater/less than zero.

Buying and selling fund shares

You can buy or sell shares of the Fund on any business day that the Fund is open through your broker or financial intermediary, or by mail or telephone. You can pay for shares by wire.

JOHCM Funds
c/o The Northern Trust Company
P.O. Box 4766
Chicago, IL 60680-4766

Telephone
1-866-260-9549 (toll free) or 1-312-557-5913

The minimum investment for Institutional Shares is \$0, and Investor Shares is \$0. There is no minimum for additional investments. May be subject to platform minimums if purchased through a brokerage account.

Effective July 15, 2015 the JOHCM International Select Fund will be publicly offered on a limited basis only. Please refer to the prospectus for additional details.

Payments to broker-dealers and other financial intermediaries

If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Dividends, capital gains and taxes

The Fund intends to make distributions that are generally taxable as ordinary income or capital gains, except when your investment is in an IRA, 401(k) or other tax-advantaged investment plan. However, you may be subjected to tax when you withdraw monies from a tax-advantaged plan.

Prospectus offer

An investor should consider the Fund's investment objectives, risks, and charges and expenses carefully before investing or sending any money. This and other important information about the Funds can be found in the prospectus or summary prospectus which can be obtained at www.johcm.com or by calling 1 866 260

9549 or 1 312 557 5913. Please read the prospectus or summary prospectus carefully before investing. The JOHCM Funds are advised by JOHCM (USA) Inc. and distributed through JOHCM Funds Distributors, LLC. The JOHCM Funds are not FDIC-insured, may lose value, and have no bank guarantee.

Morningstar Ratings™

©2023 Morningstar, Inc. All Rights Reserved. The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings are for the share class shown only; other classes may vary.
