The performance data quoted represents past performance and is not a guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Returns less than one year are not annualized. For most recent month-end performance, please visit wbietfs.com/funds.

INVESTMENT STRATEGY

The fund seeks to manage risk to capital and provide attractive returns for long-term capital appreciation. The fund utilizes an active cash-hedged approach in an effort to protect capital against high market volatility and capture returns when markets appear favorable. Cash is used as the primary risk mitigation tool, and the strategy can raise up to 100% cash.

Dividend Frequency	Quarterly

Disclosures

An investment in the Fund is subject to investment risk, including the possible loss of principal amount invested. There is no guarantee the Advisor's investment strategy will be successful. Value style investing involves the risk that an investment made in undervalued securities may not appreciate in value as anticipated or remain undervalued for long periods of time. To the extent that the Fund invests in dividend-paying equities, if stocks held by the Fund reduce or stop paying dividends, the Fund's ability to generate income may be affected.

Small and medium capitalization companies may involve greater volatility than investing in larger and more established companies. Foreign and emerging market securities carry additional risks such as currency fluctuation, economic or financial instability, lack of timely or reliable financial information, or unfavorable political or legal developments. If the Fund invests all or a substantial portion of its assets in cash for extended periods of time, it could reduce the Fund's potential return and prevent the Fund from achieving its investment objective or lag other investment instruments.

Shares are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Owners of the shares may acquire those shares from the Fund and tender those shares for redemption to the Fund in creation units only. Market returns are based upon the midpoint of the bid-ask spread at 4:00pm EST (when NAV is normally determined for most ETFs). A fund's NAV is the sum of all its assets less any liabilities, divided by the number of shares outstanding. Market price returns do not represent the returns you would receive if you traded shares at other times.

Investors should consider the investment objective, risks, charges, and expenses carefully before investing. For a prospectus and summary prospectus containing this and other information about the Fund please visit our website at www.wbietfs.com or call 1-800-772-5810. Read the prospectus carefully before investing.

Russell 3000 Value TR Index: comprised of Russell 3000 companies with lower predicted and historical growth rates. **Credit Suisse Hedge Fund USD:** an asset-weighted hedge fund index using the Credit Suisse Hedge Fund Database, which tracks approximately 9,000 funds with a minimum of US \$50 million under management, a 12-month track record, and audited financial statements. The index is calculated and rebalanced on a monthly basis, and reflects performance net of all hedge fund component performance fees and expenses. Indexes are unmanaged. It is not possible to invest directly in an index. **S&P 500 TR Index:** includes a representative sample of large-cap U.S. companies in leading industries where all cash payouts (dividends) are reinvested automatically.

SEC Yield: reflects the dividends and interest earned during the most recent 30-day period covered by the Fund's filings with the SEC, after the deduction of the Fund's expenses. The subsidized yield reflects fee waivers and/or expense reimbursements during the period. The unsubsidized yield is not adjusted. Without waivers and/or reimbursements, yields would be reduced.

Alpha: measure of risk-adjusted excess return. Positive Alpha indicates the portfolio has performed better than its level of risk (measured by Beta) would predict. **Beta:** measure of volatility relative to a given index; Beta above 1 is more volatile than the index; Beta less than 1 is less volatile. **Up and Down Capture Ratios:** used to evaluate how well a manager performed relative to an index during periods when the index is up or down. **Maximum Drawdown:** measures the peak-to-trough loss of an investment, indicating capital preservation. **Standard Deviation:** measure of volatility; greater STD indicates a more volatile strategy or index during a given time period.
