1	2	3	4	5	\$2,898 MM	0.10%	VHCIX	3.4%	02/05/04	5485

## Investment objective

Vanguard Health Care Index Fund seeks to track the performance of a benchmark index that measures the investment return of health care stocks.

## Investment strategy

The fund employs an indexing investment approach designed to track the performance of the MSCI US Investable Market Index (IMI)/Health Care 25/50, an index made up of stocks of large, mid-size, and small U.S. companies within the health care sector, as classified under the Global Industry Classification Standard (GICS). The GICS health care sector includes health care provider and services companies, companies that manufacture and distribute health care equipment and supplies, and health care technology companies. It also includes companies involved in the research, development, production, and marketing of pharmaceuticals and biotechnology products.

The fund attempts to replicate the target index by seeking to invest all, or substantially all, of its assets in the stocks that make up the index, in order to hold each stock in approximately the same proportion as its weighting in the index.

## Growth of a \$10,000 investment: January 31, 2013–December 31, 2022

## Annual returns

## Total returns

	Periods ended June 30, 2023					
	Quarter	Year to date	One year	Three years	Five years	Ten years
<b>Fund</b>	3.11%	-0.59%	5.62%	9.78%	10.64%	12.59%
<b>Benchmark</b>	3.14%	-0.55%	5.70%	9.86%	10.71%	12.66%

The performance data shown represent past performance, which is not a guarantee of future results. Investment returns and principal value will fluctuate, so investors' shares, when sold, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data cited. For performance data current to the most recent month-end, visit our website at [vanguard.com/performance](http://vanguard.com/performance). The performance of an index is not an exact representation of any particular investment, as you cannot invest directly in an index.

Figures for periods of less than one year are cumulative returns. All other figures represent average annual returns. Performance figures include the reinvestment of all dividends and any capital gains distributions. All returns are net of expenses.

### Plain talk about risk

An investment in the fund could lose money over short or even long periods. You should expect the fund's share price and total return to fluctuate within a wide range, like the fluctuations of the overall stock market. The fund's performance could be hurt by:

**Stock market risk:** The chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising stock prices and periods of falling stock prices. The fund's target index may, at times, become focused in stocks of a particular sector, category, or group of companies. Because the fund seeks to track its target index, the fund may underperform the overall stock market.

**Sector risk:** The chance that significant problems will affect a particular sector, or that returns from that sector will trail returns from the overall stock market. Daily fluctuations in specific market sectors are often more extreme or volatile than fluctuations in the overall market. Because the fund invests all, or substantially all, of its assets in the health care sector, the fund's performance largely depends—for better or for worse—on the general condition of that sector. Companies in the health care sector could be affected by, among other things, patent protection, government regulation, research and development costs, litigation, and competitive forces. Sector risk is expected to be high for the fund.

**Nondiversification risk:** The chance that the fund's performance may be hurt disproportionately by the poor performance of relatively few stocks or even a single stock. The fund is considered nondiversified, which means that it may invest a greater percentage of its assets in the securities of a small number of issuers as compared with other mutual funds. Because the fund tends to invest a relatively high percentage of its assets in its ten largest holdings, fluctuations in the market value of a single fund holding could cause significant changes to the fund's share price. Nondiversification risk is expected to be high for the fund.

**Investment style risk:** The chance that returns from the types of stocks in which the fund invests will trail returns from the overall stock market. Small-, mid-, and large-cap stocks each tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years. Historically, small- and mid-cap stocks have been more volatile in price than large-cap stocks. Small and mid-size companies tend to have greater stock volatility because, among other things, these companies are more sensitive to changing economic conditions.
